## Lord Thomson's legacy

There was always something refreshing about Lord Thomson's blunt approach to the publishing business. "I am in business to make money," he commented often, "and I buy more newspapers to make more money to buy more newspapers."

Buy newspapers he did, and today his is a story of which legends are made. Leaving school at age 13, the son of a poor Toronto bar- as attested by the wide spectrum of views repber, Roy Thomson put his shrewd business acumen to work and eventually ended up with a far-flung empire of 148 newspapers and 138: magazines in Canada, the United States, Af-. rica, and the West Indies. In his late, 70s he. even ventured successfully into the oil business. Certainly his commercial achievements newspaper was a financial liability. were a supreme example of the motto he. Here is a legacy of which all those who cherchose when elevated to the British peerage: ish a free press can partake.

"Never a Backward Step."

It is more than a rags-to-riches story that Lord Thomson of Fleet bequeaths his admirers, however. Those in the world of journalism, especially, will remember most the integrity of thought that enabled him to leave the job of running the newspapers to the editors. Their editorial independence was uncommon, resented among his newspapers. When, at the height of his career, he acquired control of The Times of London, he gave the editors two instructions; to tell the truth and to be unconcerned about his personal interest. This remained his policy throughout even though the

## S. African Coloreds:

## 'We won't take what blacks can't have'

By June Goodwin Staff correspondent of The Christian Science Monitor

Cape Town For the first time the South African Government is being challenged publicly from within its own establishment to abolish apartheld (the legal separation of races).

The challenge comes from the Dutch Reformed Church, which generally is considered to be the religious arm of the white Nationalist Purty that has ruled the country since 1948.

The attack is a two-pronged one by ministers in the Colored (mixed race) Dutch Reformed Church, which is a "daughter church" of the white Dutch Reformed Church.

Officials of the Colored church, who are attending the synod here of reformed churches from around the world, came out with a statement that said apartheid is "rejected by an increasing number of Colored people more and more strongly."

But the real movers behind the challenge

are a group of 17 Colored ministers who signed a dictarition type Consecution the Strong est possible terms the soful structure of apartheid," and saying, "we refuse to accept privileges that are not given to the rest of the black rommunity, and we refuse to be used any onger by the divide and rule politics of the

This means the Coloreds, who have always been close to the Afrikaners (the whites of Dutch descent who are ruling South Africa) now have aligned themselves with the blacks. In effect they are saying to the government: "We cannot be bought off with privileges, such as home ownership, which the blacks

# France wilts in European drought

Special to the Christian Science Monitor

"The experts are calling this the worst drought since 1893," signs French Agriculture A. Rocketeller) gleefully holding aloft a white Ministry spokesman Marie Anne Etaix. Although northwest Europe's heat wave has subsided a little, meteorologists say there i

still no sign of heavy rains on the horizon. The drought has struck hardest in north and west France, then Belgium, parts of Britain

and northern Italy..
International economists here say Americans as well as Europeans can expect signifi-

cantly higher beef prices. But the experts say that in some ways the drought may not be so bad after all.

"The drought will have a minimal effect on world food supplies," says economist Brian Jeffries of the Paris-based Organization for Economic Cooperation and Development (OECD). And he adds: "It has solved a real

threat of surpluses in wheat." Mr. Jeffries said the United States's wheat production this year has been enormous. India and Bangladesh (isually a crisis erea) have had good crops. The Soviet Union is expected.

# U.S. foreign policy won't swerve

America's regularly scheduled, quadrennial, political crisis is substantially over without serious damage either to the American political sys-

tem or to the domestic and foreign policies of the United States. Overseas America-watchers now car, assume in their calculations that no important policy changes are to be expected in Washington or from Washington in the foreseeable future.

This conclusion flows from the deeds of both omission and commission of the two major American political parties during the summer convention phase now completed of the long American presidential elec-

The denouement still lies 21/2 months away. Much political rhetoric will ascend to the skies meanwhile. Uncertainties of relatively minor import still exist. But the major uncertainty has been dispelled.

The election campaign which lies ahead will be waged between two nonideological political parties. The differences between them are in emphasis, not in substance or general direction. The main candidates are both generalists who differ with each other over such things as how much can be done to stimulate employment without risking more in-

But it can be taken for granted that the man who will take office as the next elected president of the United States next January, whether he be Democrat or Republican, will to the best of his ability try to keep the American economy in continued growth without releasing another round

It can equally be taken for granted that the next American president will continue to practice detente with the Soviet Union, although shunning the word, and will probably try harder than has been done over recent years to refurbish the alliances with Western Europe and Japan.

Any doubt about substantial continuity of both domestic and foreign policy was largely removed shortly before the Republican convention opened when Ronald Reagan, who has been challenging President Gerald Ford for the Republican presidential nomination, picked as his prospective running mate a pro-labor liberal from the Northeastern state of

That drained the ideology out of the American political situation. Until that moment Mr. Reagan appeared to be a right-wing American conservative with chauvinistic overtones whose political support came almost exclusively from the upper economic classes. At that moment he joined his Republican rival, President Ford, and his possible Demo-By Barth J. Falkenberg, staff photographer cratic rival, Jimmy Carter, in aiming his appeal at a broad American

# The earth is shaking — but no more than usual

By David F. Salisbury Staff correspondent of The Christian Science Monitor

Earthquakes have repeatedly struck world population centers this year, but the planet as a whole has not been heaving and shaking more violently than normal.

"There is no global pattern," says Don L. Anderson, director of California Institute of Technology's seismological laboratory. "It is just that these earthquakes" have occurred in heavily populated

The latest major earthquake was

Tuesday in the Philippines. There an earthquake jarred several scattered islands in the Colebes Sea in the middle of the night. But the extent of destruction was magnified by an 18-foot tidal wave that was created and swept over the islands of Mindanao, Sulu, Tawi, and Basilan. The Philippines lie in an active earth-

The Philippine quake registered 8.0 on the Richter scale at the U.S. National Earthquake Information Center in Golden. Colorado. This is considerably larger than the 7.6 magnitude earthquake which devastated the Tangshan industrial area northeast of Poking, China, on July 28.

(The Tangshan quake was mistakenly reported as 8.2.) Enribouakes reported early this year

such as that which rocked Gualemala were considerably smaller, less than 7. Each year hundreds of quakes occur in this energy range, but most are centered in out-of-the-way places.

At the turn of the century, between 1890: and 1920, the world was racked with many extremely violent earthquakes, says Dr. Anderson, At the same time, the earth's climate changed and its rate of rotation altered. The scientist feels these three are linked somehow. But this is not happening now, lie says.

Coloreds join apartheid protest. In South Africa the Coloreds (people of mixed race) have always been favored over the blacks. But now they too are joining in anti-government protests. Reporter June Goodwin has been talking to some of them to find out why. Page 8

disaster-free year and a more efficient government lightens the lot of the city-dweller, the country-dweller, part of the "other Bangladosh" goes hungry. Page 11

## Movies — cruel to animals?

By David Sterritt

world, Marlon Brando braces himself in the saddle, alms, and hurls a vicious-looking weapon. In the next shot, the knife has apparently impaled a quivering dying rabbit.

From a spectator's-eye-view, it can be difficult to tell whether such a scene represents cruelty to animals or tricky camera work. But some humane organizations have stopped giving Hollywood the benefit of the

The Humane Society of the United States (IISUS) has called for movie-industry volunteers to join an inside network of informants on the lookout for animal abuse. Meanwhile, the American Humane Association (AHA) keeps up a tally of alleged onscreen violations in its publication, Fresh In a recent major decision, the AHA rated "unacceptable" Arthur Penn's film

a sadistic "regulator" who kills rustlers and, on occasion, rabbits. In the movies, however, things are not always what they seem. Robert M. Sherman,

coproducer of "Breaks," bristles at the

"The Missouri Breaks," which stars Jack

Nicholson as a cattle rustler and Brando as

In full color on wide screens around the mere suggestion of inhumane treatment. The rabbit was acting, he told this newspaper, explaining that Brando's knife was replaced by a dummy made of plastic knitting needles and fastened to the animal with lishing line. The rabbit shed "the same fake blood we used for Marion Brando and Harry Dean Stanton," Mr. Sherman continued, "neither of whom were killed during the shooting of the picture."

These incidents recall the AHA "unacceptable" rating given to Richard Brooks's "Bite the Bullet." The citation seemed reasonable at first, given some on-screen sequences including one in which an actor apparently knocks an animal unconscious with his fist. Yet author and animal lover Cleveland Amory came out publicly in support of the movie after seeing film clips that depicted how the shots were actually obtained. No cruelty had occurred, Mr. Amory maintained. Producer Sherman states similar film (ootage is available to bolster his defense of "The Missouri Breaks."

Such discrepancies have not deterred the HSUS "major campaign to identify cruelty to animals in the film industry," however. Speaking in Variety, the group's "wildlife

expert," Sue Pressman, reports "the number of HSUS informants within the movie industry is growing, as word spreads about HSUS's determination to prevent cruelty to acting animals."

THE CHRISTIAN SCIENCE MONTO

Variety further notes that Jack Valenti, president of the Motion Picture Association of America (MPAA), has forwarded an HSUS memo to MPAA associates. Mr. Valenti is quoted as recognizing "the extent to which the Humane Society ... is checking through 'undercover agents' on instances of such crucity. The society is turning to the law for prosecution and enforcement.

Similar trends can be spotted outside the United States, as well. In Sweden, long known for its liberal attitude toward explicit sex in film, state censors still crack down on violence, and are reported to have blocked the showing of a movie called "The Dove" until deletion of a short segment in which a shark almost catches a swimming

All this could be part of a film tendency away from violence in general, as spearheaded by playwright Tennessee Williams president of this year's Cannes Film Festial jury. Decrying cruelty in movies, Williams disputed the long-time practice of using violence to achieve "catharsis," or purging of the emotions, holding that brutality is not a permanent part of human emotional equipment. Williams's controversial speech did not prevent the violent "Taxi Driver" from taking top prize at the filmfest, how-

# S. African discusses how to foster peaceful change

Staff correspondent of The Christian Science Monitor

The forces for nonviolent change in southern Africa - including white-ruled Rhodesia - are enormous, and for the United States and the rest of the world to ignore these forces is to

aid and abet violence. So says well-known South African author Laurens van der Post, a man with an empathetic toehold in a dozen countries, who likes to do his writing in England.

# **AFRICAN**

He says he cannot write in Africa although it is Africa that is at the pulse of his philosophy and books. When he returns to South Africa each year, he plunges into battles and gets in-volved with local issues, but he must return to England to be quiet and produce. The United States, Mr. van der Post sald in

an interview at his eighth-floor London apartment near the Thames, could "turn the tide for freedom all over Africa by saying, 'Look here, we stand for the independence of Africa; we stand for what is right in Africa; we stand for what is not corrupt in Africa; and wherever there is any good in Africa we will reinforce it. But we will not brook any more exploitation of the grievances of Africans by outside sources.'

"What happens in the world is a battle of good and evil," the author continued. "And come what may we make our stand. If there is no good, then we make our stand on what is least bad, and we defend it. Unless we get hack to that basis, we're drifting tack to an other world war, and we're lost. We're third accomplices after the fact to this Marrist axiom that history can only be transformed by revolution and bloodshed and that the people's

# What went wrong with the Giscard-Chirac team?

By Jim Browning Special to The Christian Science Monitor

Official Paris is abuzz with forecasts of a Moreover, Mr. Chirac and Mr. Giscard month or the start of September.

across a wide spectrum of the press, is that re-edly insists on being served first at governform-minded President Giscard d'Estaing will ment lunches; and once, receiving Mr. Chirac ask his ambitious young Gaullist Prime Min- and his wife, arranged for himself and Mrs. ister, Jacques Chirac, to resign.

The conservative news magazine, Le Point, with good contacts to the old-line Gaullist movement, reported last week that top presidential assistants and government function aries have been ordered to cut vacations short if necessary to be back in Paris by Aug. 20.

A break between Mr. Chirac and the President has been building for some months, according to political observers here. It stems pair of young men trying to breathe new life from both political and personal differences between two strong-willed men.

Mr. Chirac was the protégé of former President Georges Pompidou, who called him "my buildozer" because of Mr. Chirac's drive and long hours on the job.

After he was named Prime Minister by President Giscard d'Estaing in 1974, Mr. Chirac surprised most observors by swiftly taking control of the shattered and blokering Gaullist

Many analysts expected Mr. Giscard d'Estaing, an Independent Republican and not a Gaullist party member, to reconstitute the old government alliance in his own image. Instoad, Prime Minister Chirac held the Gaullists together, notably in Parliament, where they are still predominant. Mr. Giscard d'Estaing's party has remained in the parliamentary minority, allied to the Gaullists.

The Gaullists have therefore been strong enough to force modification of some of the President's own proposals, such as the highly Paris controversial capital gains tax, voted this year.

major government change at the end of this d'Estaing have displayed a sharp difference in style. The President appears disdainful to The expectation, both in political circles and many of his high-ranking associates. He report-Giscard d'Estaing to have more elaborate and comfortable chairs.

> The President also insists on leaving for ocensional long weekends or evenings, while Mr. Chirac works late.

When they began working together shortly after Mr. Giscard d'Estaing's election, the President and Prime Minister were seen as a into the majority alliance.

If Mr. Chirac now breaks with the President. two important problems are posed: Who would replace him? And how would Mr. Giscard d'Estaing control the Gaullists, on whom he epends for parliamentary support?

Among the options facing Mr. Giscard d'Estaing are these:

1. To choose one of Mr. Chirac's Gaullist rivals as a new prime minister, in an effort to exert presidential authority and rotain Gaullist

2. To choose a prime minister from among his own followers if he can find a way to control the allegiance of Mr. Chirac and the Gaullists without a Gaullist prime minister.

3. To retain Mr. Chirac in the government or even as Prime Minister. If so, other government changes could be expected.

Spinola: not entirely welcome

## No homecoming party for Gen. Spinola By Helen Gibson signed after an attempt to use the "slight ma-The Communists' violent opposition to Gen-Special to crail Spinola reflects a somewhat ironic twist in

The Christian Science Monitor

tonio de Spinola after 18 months in exile, combined with dissension in political circles and reshuffles at high military levels, has brought Portugal's political scene to a boil once again. General Spinola's recent arrival on a TWA flight from New York aroused an irritated exclamation of "ill timed" from Prime Minister Mario Soares and a storm of protest from the Communists and the far Left.

Leftist posters, graffiti, demonstrations, and angry outbursts in Parliament to the effect that General Spinola was a traitor, an assassin, and a Nazi were immediately unleashed. The Left's anger increased when General Spinola was detained in Caxias prison for only two days of questioning, then set free.

General Spinola became the first provisional president after the military coup overthrew in events since his departure has made him politi-April, 1974, Portugal's ouldated right-wing re- cally "ultrapassado," a favorite revolutionary gime. Within five months, however, he re- word meaning "superseded."

Communists who took control.

Mr. Soares had said many times that General Spinola could return to Portugal as long as he faced the charges against him. General Spinola was also implicated in the clandestine Liberation Army composed of rightist exiles and formed at the height of the Communists' power in Portugal last year. But for Mr. Soares, it was the wrong time to have his offer taken up, for he was engrossed in seeing his new Socialist government program through its final debate in Parliament.

Although the Left reacted violently to Coneral Spinola's return, most politicians to the right of the Communists feel that the flow of

He was incl. The government formed by Mr. Soaros immediately stripped of his rank by the pro-denied the Communists such portfolios for the first time in the revolution.

> To all appearances, the general public agrees with Mr. Soares on this anti-Communist stance. For after more than two years of revolution, most people say they are tired of leftistprovoked agitation and convulsions.

And General Spinola to some extent represents the unrest and uncertainty of the past period to many Portuguese, who have just dragged themselves to two elections to finally choose their government and President. Despite all the noise and flurry, it would seem that General Spinola's power base has dissipated because of this.

In the words of Labor Minister Marcelo Curto, "Spinola is today a man who lacks the importance he wanted to have."

By David K. Willis Staff correspondent of The Christian Science Monitor

It is spectacularly easy to get lost in this huge, gray capital city of communism. It is also easy to get wet, to buy bread (forks are provided so customers can poke and prod for freshness), to find a parking space (and a park) - and to lose some preconceptions about Moscow life.

It is hard for a first-time visitor to turn left in his car (forbidden on most main streets), to see while driving at night (only parking lights are allowed and street lighting is often poor), and to find a bus slop (often widely spaced).

These are some of this correspondent's first impressions of Moscow - a city whose daily life is still relatively little known to most people outside the Soviet Union.

#### People well dressed

At first sight, all is deceptively familiar lots of trucks, small Zhiguli passenger cars that look like Fiats, Moskvitches that look like most compacts, even some small station wagon models, trolley buses, neon lights (though they extol Leninism and the recent 25th Communist Party congress instead of cameras and airlines), and lots of people better dressed than I had expected. Men are in serviceable sults and shoes,

**Lost in Red Square** 

women have bright print scarves, young people often wear either American jeans or the new Soviet jeans coming onto the mar-

But beneath the surface, it is not the same at all, as getting from the British Embassy (across the Moscow River from the Kremlin) to the American Embassy a mile and a half away quickly proved.

"It's easy," I was reassured. "Walk over the bridge, up the hill to Kalinin Prospect [street], catch the No. 2 trolley bus, get off at the ring road, and walk half a block."

Easy? The heavy clouds above the golden domes of the Kremlin opened up half way across the bridge. For the first time in three weeks I saw (and felt) rain. Just in from drought-stricken England, I had no

#### A wet crossing

The endless hill was a wall of water. The intersection at Kalinin seemed as wide as a football field. I crossed - to the wrong side. I could not find the bus stop. Once on a bus the honor system of paying the fare had to be quickly negotiated - the four kopecks (five and a half cents) in the slot, the ticket clicked out. Then a sprint through one of the many (and useful) pedestrian underpasses beneath major intersections, out into the rain again - on the wrong side of the

Once at the embassy, the final indignity: Instead of routinely nodding at a Westerner. the Russian policeman at the gate clearly thought the drenched, harassed, panting figure before him was a Russian about to cause an international incident - and stopped me. I muttered and brushed past.

Nor is driving quite the same thing here. Unable to turn left at major intersections, I keep on going right and doubling back and losing the street I started with. I also almost lost an embassy. It was tantalizingly

close across a bridge - on the left. But couldn't see how to turn left (I missed a sneaky right-hand ramp back under the bridge) and was condemned to 15 minutes on another street that permitted neither left nor right turns for a haif a mile.

Shopping for bread - freely available here in spite of recent shortages elsewhere in the Soviet Union - was interesting. Dark brown square loaves, long white loaves, assorted buns, are all laid out on racks. The approved procedure is to pick up one of the two-pronged forks provided and use its back (never its prongs) vigorously to lest the consistency. Loaves cost only a few kopecks (about 25 cents each) and taste excellent: But it is not wrapped and there are no bags. You bring your own.

Parking spaces are easy to find, our pared with any major Western city. parked almost right outside the Foreign Ministry at 11 a.m. on a recent weekday. Much of the traffic seems on its way to gerernment lots hidden away somestee. Westerners can even park on some of the wide sidewalks.

At night - watch out. Stories are legion about collisions and bumps in the poor visibility - though, ironically, it is the law to switch on parking lights when going through

# Suspicions grow about S. Korea's powerful lobby

Staff correspondent of The Christian Science Monitor

Washington The "South Korean Lobby" - for Americans a permanent and powerful remembrance of the country for which they marched into battle 26 years ago - is coming under mounting attack here.

The target is a shadowy network of lobbyists, promoters, the Korean Central Infeiligence Agency (KCIA), and the nationalistic evangelism of the Rev. Sun Myung Moon - all aimed at keeping alive United States military and economic support for an ally which increasingly has become a repressive dictatorship.

The occasionally heavy-handed tactics of the lobby show signs of straining the tolerance of South Korea's stoutest Western defender:

## How Peking ended its earthquake alert-

By Ross II. Munro Special to The Christian Science Monitor ₺ 1976 Toronto Globe and Mail

The shantytowns where most of Pedig's citizens have lived since the severe July 28 carthquake are starting to dis-ippear rapidity after original causes said end to the 17-day carthquake alort. After dawn hast Monday morning,

posple in many areas of the city were carfig their beds back to their homes and taking apart the tent-like shelters made of boards, piastic sheeting, reed mats, and bricks. Most of the people neatly piled the materials on the sidewalks or carried back to their buildings, but if was tear that a massive cleanup of dirt and use will be required.

Lister that Monday morning most shel-lers remained standing, but many of them were expected to be taken down later is the day. At least a few shelters will probby remain for a considerable length of time because nome people have reporting on the streets until their homes are re-

is investigating a wide range of murky activities -- including allegations that the KCIA operates as a "secret police" in this country, intimidating Korean-Americans critical of the Seoul government; and that it has ties with Mr. Moon's Unification Church. More hearings are scheduled next month.

• The Department of Justice reportedly is readying legal action on such charges shuffled for years among the State Department, Central Intelligence Agency, and itself. Justice declines comment on pending cases, but an aide of the House subcommittee on international organizations says the department is "looking into various allegations" raised by the panet's hearings.

• The Federal Bureau of Investigation is probing charges the South Korean Government bribed two congressmen, Rep. Joseph P. Addabbo (D) of New York and Rep. Robert L. Leggett (D) of California, members of the House Defense Appropriations Subcommittee and Armed Services Committee, respectively. Also under examination is their friendship with a Korean-born clork of House Speaker Carl Albert, Miss Suzi Park Thomson.

South Korea's legal problems in this country are compounded by hints of approaching political problems. Democratic presidential nominee Jimmy Carter, the 2-to-1 leader in national

ally phase on higherwords of the party plate form) in five to seven years the 40,000 Amerbased in South Korea.

Preventing just such a pullour is the chief preoccupation of the South Korean lobby. Its weapons of persuasion include: an estimaled 30 KCIA agents plus an unknown num mated to KCIA agents plus an unknown number of what a congressional investigator calls strong arm operatives" working with them frequents rips to South Kores for congressional Capitol Hill lobbying; and well-financed public reinflors campaigns by followers of the Rev Mr. Moore Rev. # Anarchy retreats from the city — but not from the village

Staff correspondent of The Christian Science Monitor

Dacca, Bangladesh For once there is some good news coming out of Bangladesh.

Last year was the first since this crowded south Asian country gained independence in 1971 that some kind of natural calamity — cyclone, floods, drought - did not strike to obliterate crops. With favorable weather the warehouses are

overflowing with grain

In addition there have been some improvements that can be credited to the country's much-criticized governments. Before his assassination last year, Shelkh Mujibur Rahman, the once-popular father figure and President of Bangladesh, summoned the courage to devalue 13 the currency and impose credit controls to help curb inflation.

The Army-supported politicians who took over from Sheikh Mujib increased the efficlency of the government to a degree by bringing back a number of talented civil servants who had been previously ousted for political reasons. And the military men who took control nine months ago sharply reduced the highlevel corruption and smuggling that had drained much of the country's wealth.

A visitor returning to Dacca, the Bangladesh capital after more than a year's absence finds that the ramshackle city looks neater, cleaner, and more efficiently run. (A price was paid for this, of course. Some of the neatness, as well as a reduction in the number of beggars roaming the streets, can be attributed to the Mujib government's brutal eviction and subsequent transfer of tens of thousands of slum dwellers to camps outside the city.)

In the 65,000 villages, things are far from under complete control. Dissidents and desperate men of every imaginable variety continue to kill off politicians and landowners. But when compared with the near chaos and high rate of trouble. assassinations of the Mujib period, the 'law and order" situation seems to have definitely

In short, Bangladesh has gained a breather from what appeared to be a plunge toward anarchy. Whether the military elite now in con-the JSD. trol and their allies in the civil service will be able to take advantage of what the World Bank described recently as the "current favorable circumstances" is another question.

The military rulers are far from free to devote themselves fully to economic development. They remain preoccupied, first with dissent from within the armed forces, and second with a whole range of disputes involving Bangladesh's big neighbor, India.

The Indians are accused of supporting Bangladeshi dissidents in their raids on Bangladosh border outposts and of diverting more than a fair share of water from the Ganges River through India's massive Farakka Barrage, thus causing a scarcity of water needed for farming, fishing, industry, and river transportation the JSD as well as the Indian-supported guor-

in sizable sections of Bangladesh. The Indians, for their part, appear deeply suspicious of Bangladesh's new friendship with China and its dependence on aid from the United States and other Western donors for its economic survi-

mains is the widespread fear in Dacca that if the current "interim" government keeps its promise to hold elections next year, it will bring nothing but a renewal of conflict and

Most Bangladesh political parties are cooperating with the martial law authorities, but one is regarded as a distinct enemy. This is the Jatyo Samjtantrik Dal or National Socialist Party, which is usually referred to simply as

and highly factionalized, the military authorities take it seriously. They recently opened a secret trial at the heavily guarded central jail of a number of JSD members who were linked with a rebellion in the Army last year. The special military tribunal sentenced to death Lt. Col. Abu Taher, commander of the JSD's military arm and a onetime ally of the country's current military strongman, Maj. Gen. Ziaur Rahman, the Army Chief of Staff. The Colonel and General Zia apparently had argued over a list of demands for radical change toward a classless Army being made by the JSD.

Even if the government can keep in check

rillas it is combating along its borders, there is considerable doubt that it can reverse the de- and not just beg for it," said one foreign speteriorating economic situation in the rural cialist. areas, where population growth continues to outstrip resources and the number of landless farmers is steadily growing.

A year free from natural disaster means ample grain for the cities

An estimated 40 percent or more of the An indication of how fragile the situation repeople still fail to get anything close to an internationally accepted minimum of food, and a in force distributes food at subsidized prices to the city dwellers and not to the needy majority

in the countryside. Representatives of a number of aid-giving countries and institutions are convinced that the only way to get the Bangladesh Government to make the tough decisions required to gram alone. improve the lot of the rural poor is to begin to Although the JSD appears to be disorganized the government from pursuing a more vigor-

food prices, thus giving the farmers less incentive to grow more. The aid also provides, through food sales to ration-card holders, an important segment of the government's revenue. And this, say some aid donors, allows the government to avoid getting on with the difficult task of working toward self-sufficiency through the collection of taxes. Finally, it is noted that the government has now so much food in stock that it is likely to lose a considerable portion to rain, rot, and posts through a lack of adequate storage facil-

"They've got to learn to manage food grain The government argues, however, that it re-

oulres sizable surplus stocks to guard against oforescen calamitles.

The government has declared family planning, or population control, to be its "No. 1 prisimilar proportion of the agricultural labor ority." For a country as small as the American force is now landless. The ration system now state of Wisconsin with 80 million people, the world's eighth largest population, that makes good sense. And there is no lack of birth-control devices or funding. The World Bank-led aid consortium, the United Nations, and the U.S. Agency for International Development are providing \$66 million in assistance for this pro-

But most of the government's family-planreduce sharply the flow of their food aid. They ming field workers appear to lack adequate moargue that the current high level discourages tivation, and the government has yet to develop an effective program for the distribution ous rice procurement program and depresses of the birth-control devices. Many observers argue that as long as life in Bangladesh remains highly uncortain and farmers see their future security in their children, they are going to continue to have large families.

While there have been several changes of government in Dacca in less than a year, in the countryside it sometimes appears that there has been no change at all.

"Basically, nothing has changed," said one Bengali who has done research in the rural areas and grown cynical in recent years, "Only the name of the king has changed,"

There are people who have a two-Bangladesh theory," said a diplomat in Dacca. "There are a couple of million in the elite. mostly in the cities, versus tens of millions out there in the 'other Bangladesh.' "If I were part of the elite, I'd be worried

that this other Bangladesh would come and eat me up," he said. Said another diplomat, "Anyone using West-

ere logic would think this place would be rine r revolt. But I don't think it is.' I asked the overseer of the group of farmers

who were carning a little extra money digging a fish tank, or reservoir, north of Dacca under U.S.-aid financing why there was no revolt. Those whom I had interviewed looked more fortunate than many Bengalis, but they complained that their stomachs were empty half the year and that those of them who had land were being forced to sell it.

"Yes, they are getting poorer and poprer," the overseer replied. "But they say, 'If I am poor, it is because Allah willed it."

Some people argue that this fatalism gives the country the strength to keep muddling through. But in the Bangladesh Army, there are young and loss fatalistic men clamoring for reform. It is from that quarter, and not from the rural areas, that the immediate threat to the military rulers lies.

Out in the countryside, the 'other Bangladesh,' hunger is rife:

would probably begin.

This does not say that a President Reagan would behave much the same as a President Ford or a President Carter. In the White House a President Reagan would undoubtedly try to practice some of the beliefs of his original conservative constituency. But it does mean that his conservative inclinations would probably be as tempered by realism and expediency as the equally conservative in-clination of Geraid Ford has been tempered by the same considerations from the moment he left the corridors of Congress.

which has long been languishing is to have at

slipped toward becoming the party of the Loft. The Republicans had been moving towards the posture of a party of the hight. The Cartercandidacy checked the leftwird drift among Democrats and pulled them back into the political center.

The Resgan choice of Mr. Schweiker did the same for the Republicans. # Super-powers compete for 'third world's' favor

## Who will out-influence whom in Indian Ocean and trade?

By David K. Willis

Staff correspondent of The Christian Science Monitor

Moscow While most American eyes were fixed on Kansas City, the United State was deep in a new and intense round of superpower maneuvering with Moscow and Peking for influence in the increasingly important bloc of so-called nonaligned nations in the world.

• Diplomatic and military strategies in the Indian Ocean, with Moscow lobbying for support against the U.S. base on the island of Diego Garcia and against Peking's acceptance of the need for such a base there. • The future direction of world trade in, and the prices that

American and other consumers will pay for, the vital raw materials (food, oil, minerals) that the nonaligned bloc produces and whose marketing it is determined to control. The latest maneuvering was focused on Colombo, the capital of tropical Sri Lanka (formerly Ceylon) where the fifth confer-

Western sources here concede that the Soviet Union has scored some successes in the battle for influence with the nonaligned by championing many of the bloc's causes as its

ence of nonaligned countries was held last week.

#### Soviets avoid stand

In a barrage of Prayda and Izvestia articles in recent weeks, Moscow has insisted that the nonaligned struggle is essentially an anticolonial one. Since the Soviet Union has no colonies of its own, the argument runs. Moscow can take none of the blame for the chaos in which the former colonial powers (the U.S. chief among them) has mired the emerging world.

At the same time the United States, Western analysts here believe, is better off in the eyes of the developing world than it was a year ago. This the analysis attribute to a new spirit of pragmatism in such nations as Egypt, now that the first generation of fiery anti-colonial leaders has largely given way to those who must grapple with the nuts and bolts of serious growth, trade, and diplomacy.

A major Russian aim in Colombo, as seen here, was to support Sri Lanka's call for banning military bases from the In-

dian Ocean (making the ocean a zone of peace) - without letting the concept widen to the point where rights of passage might be restricted in an area where the Soviet Navy has been more and more active.

#### Vote side-stepped

Western sources say Moscow pays only lip service to the zone of peace since the Soviets have abstained from United Nations votes on the issue so far.

Another major Soviet aim was to ensure that criticism of big-power exploitation does not include Moscow itself - whose own nonmilitary aid programs are actually small in volume and hard in terms, Western sources say.

China, it is generally agreed, lags in the race for influence. In Africa, for example, Tanzania has told Peking not to expect any favors in return for completion of China's most visible aid project on the continent - the Tanzanlan-Zambian railroad. And Soviet aid seems to be making inroads in Mozambique as well as in Angola and Somalia.

Washington has been working in United Nations corridors and in nonaligned capitals to try to limit Soviet successes and to damp down as bost it can potentially embarrassing calls in Colombo for action on a number of fronts. Among them: a North Korean call for a pullout of U.S. forces from South Korea; Arab efforts to gain support for excluding Israel from the United Nations; attacks on militinational corporations.

India and Cuba scored a partial tactical success for the Soviet Union in Colombo by limiting Romania's participation to guest status (able to attend plenary sessions but not to speak).

Moscow opposed full observer status for Romania (which would have given it the right to speak) since the Soviets agree with the general concept that being nonaligned in fact means nonaligned with military blocs. Romania is a member of the

The Philippines and Portugal were also accorded guest status, despite their ties with SEATO and NATO respectively.

## Non-aligned nations get together in Sri Lanka

By A. B. Mendis Special to The Christian Science Monitor

Colombo, Srl Lanks

Leaders from 84 countries have been meeting in Colombo to consider a series of resolutions prepared for them by their foreign ministers in four days of presummit discussions here.

One apparent result of the Lebanese civil war and the Palestinians' role in it was a toning down of the resolution on Israel drafted by the Arab foreign ministers.

The Palestine Liberation Organization (PLO) wanted a resolution demanding the immediate expulsion of Israel from the United Nations. Instead the Arab foreign ministers opted for a compromise resolution linking possible loss of UN membership to Israel's record in Implementing UN resolutions on the

#### Some leaders absent

There were some unexpected absences from the summit notably those of Cuban Promier Fidel Castro and North Korean Premier Kim II-sung, who sent deputies.

The nonaligned leaders have had before them a program for joint economic moves aimed at strengthening their bargaining position in negotiations with the industrialized powers.

The program proposed setting up:

• Machinery to implement common procurement methods and also for the purchasing of goods, technology, and services from developed countries.

 Producer associations for primary commodities and manufactured goods exported by developing countries. Allied to this would be common strategies to obtain fair and remunera-

 A common fund to finance buffer stocks for the benefit of nonaligned and other developing countries.

· An association of commercial banks to exchange information and experience in banking policies and practices and training of personnel.

A pet idea of some Asian countries, including India and Sri Lanka, to build up a common market and a shipping pool of their own may take substantial form as a result of the nonaligned conference.

#### City spruced up

The Srt Lanka government of Mrs. Sirimavo Bandaranaike has gone all out to brush up Colombo's appearance for this prestigious meeting of "third world" leaders.

Thousands of workers have taken part in the face-lifting job. Within a few weeks the narrow 20-mile road from the Bandaranaike international airport into the city, which was strewn with potholes and hairpin bends, has been straightened out and leveled. Beggars disappeared oversight as did ugly clusters of huts disfiguring some of the city's roads.

Mrs. Bandaranaike appears to have considerably enhanced her stature by the way in which she has supervixed organization of the summit.

The Chinese-built Bandaranaike International Conference Hall, where the summit is being held, already has done much to put Sri Lanka on the map. An international federation of travel agents is to hold its annual conference here in October, and the Federation of British Travel Agents has booked the

# World Food: politics keep hungry from being fed

Special to The Christian Science Monitor

Like a rocket lift-off delayed by technical difficulties, some key international efforts to tackle the (still perilous) world food situation seem unable to get off the ground.

• The establishment in June of a \$1 billion International Fund for Agricultural Development (IFAD) to help developing nations increase their agricultural investments, represents "one of the greatest achievements in international economic cooperation," says Dr. John Hannah, executive director of the World Food Council (WFC). However, the fund remains inopcrative until a remaining \$63 million is contributed.

• The World Food Program (established to implement proposals for yearly food aid made by the 1974 World Food Conference) has received 9.2 million tons of cereal grain comnliments (the target was 10 million), and funds exceeding the \$440 million goal for 1975-76 by \$200 million. But Thomas C. M. Robinson, the program's executive director, says no consensus has yet been reached between developed and developing nations on placing the aid programs on a firm footing.

 Little progress has been made toward establishing either the emergency food reserves endorsed by the World Food Council in its June meeting (a minimum of 500,000 tons of grain), or any of the proposed reserves systems, according to Peter Hendry, a Washington spokesman for the Food and Agriculture Organization of the United Nations.

If the countdown for launching these programs seems to have frozen up, political interests may be a major source of the refrigeration. At an Ivory Coast meeting of the UN Economic and Social Council (ECOSOC), UN Secretary-General Kurt Waldheim stressed a need for governments to divorce politics from development aid giving. This, he said, along with the easing of entrance of poorer nations into the markets of industrialized nations, will be necessary if developing countries are to attain more self-sufficiency in the long run.

However, cables from the Secretary-General to the some 90 member nations of IFAD to raise the \$63 million needed to put the fund into effect, have brought only one (inconclusive) response. And ministers of OPEC (the Organization of Petroleum Exporting Countries), meeting recently in Vienna, decided not to change their \$400 million contribution, feeling Western industrial countries should take up the fund's slack.

Neither OPEC nor the industrial nations, however, have yet given the Secretary-General final decisions. And if the fund's \$1 billion goal is not reached, IFAD will meet again on Sept. 26 to try to find a solution.

#### Other forums for debate

**England** 

POOLE AND DISTRICT

Poole

One unfortunate result of falling short of the \$1 billion goal would be a reduction of the \$200 million contribution of the United States, because congressional appropriations for fiscal 1976 require U.S. commitment not to exceed 20 percent of the

Further problems arise from the existence of multiple torums for international debate operating independently of the WFC, the chief body set up in 1974 to monitor and coordinate global food initiatives. For example, grain reserves negoliations of the major cereal traders at the International Wheat Council in London are at an impasse.

A compromise proposal at the World Food Council (to appease both European interest in a reserve stabilized by pricing mechanisms and adamant American interest in unhindered market conditions) was also unsuccessful. The WFC efforts were stifled, explains Larry Minear of Church World Service and the Lutheran World Relief, partly because the U.S. already felt its position had been fixed in the wheat council's pe-

Despite the difficulties, however, there has been substantial progress. IFAD not only has raised \$935 million, but the \$400 million contributed by oil-producing nations sets a noteworthy precedent in cooperation. Also, many less developed nations have contributed some \$6 million to \$8 million in nonconver tible funds (which do not show up in IFAD figures). And some governments have taken the lead in initiating commitments toward the proposed emergency 500,000-ton grain reserve - with Sweden earmarking 40,000 tons of grain, West Germany 30,000, and Norway 10,000.

Also, the WFC reached agreement on criteria for identifying countries most in need and has taken strides in translating general proposals into aid tailored to local conditions of

Britons to be paid to retire early?

The Christian Science Monitor With at least 250,000 British teen-agers out of ance on condition they did not work again work, the British Government has come up. Their jobs would be reserved for unemployed with a plan to pension off older workers and young people

By Philup Venning Special to

THE CHRISTIAN SCIENCE MONITOR

give their jobs to the young. When the school year ended last month, troduced by the Manpower Services Commisbeen looking for work for over two years.

Throughout the recession the young have suffered particularly hard. Although more pupils stay on an extra year at school, and many now leave with good academic qualifications, the Government's Manpower Services Commission believes that the long-term employment trend is not in favor of the young.

Banks and shops are switching their recruitment away from raw, often feckless, youngsters to married women, whom they consider more reliable. Besides, teen-agers are no longer the cheap option they once were. Their wage rates are now much nearer adult levels.

With Industry struggling to cope with chronic overmanning, the government is worried that some teen-agers, particularly young blacks and the handicapped, may not work for years. For unemplóyment at a stroke - on paper. But in practice the difficulties are huge.

Instead the Government has been looking at ways to encourage workers to retire before the aim is to help an extra 30,000 young people. usual age (65 for men and 60 for women). A proposal from the Department of Educa-

room for the 15,000 or so newly qualified teachers who are without jobs. More radical is the: "Swap-a-job" scheme, as Increased.

By David Mutch Staff correspondent of The Christian Science Monitor

One of these days special helicopters may be flying around checking the "thermal behavior of buildings and even whole cities. Buildings with large amounts of heat loss

# Population time bomb ticks ominously

The United States's nearest neighbor in Latin America has made remarkable economic strides in the past generation. But its population spiral threatens to wash this progress down the drain. Will instability be the result? The Montor's Latin America correspondent takes an in-depth look at the problem.

> By James Nelson Goodsell Latin America correspondent of The Christian Science Monitor

Mexico's population bomb is ticking away ominous, says a member of President Luis Echeverria Alvirer

The country's population is at present 82 million, but be adds: "The parents of the 100 millionth Mexican are a ready born and are probably running around the streets

Population. The word is beginning to haunt Mexicus More and more they see the burgeoning population of the ancient and storied land becoming a burden that threater to outstrip all the gains they have made in the past 18 to 1

It was not always so. Mexicans once scoffed at the the that population growth could present a problem. We will just find more jobs, they said, build more schools, men homes, more hospitals, more services.

Now they realize that it is not all that easy and that in ico's 3.5 percent annual population growth colors everythe else that Mexico does.

2 million more

Today's population of 62 million is up from 25 million is 25 years ago. This year alone, Mexico will add an estimati 2,170,000 to the total.

The implications are threatening not only to Mexico, also to the United States, which shares a 1,800-mile fronts with Mexico and which traditionally has served as an a cape valve for hundreds of thousands of jobless Mexicans

Equally worrisome for the United States, however, & threat that Mexico's population spiral might sperk ! stability in that country.

Instability is nothing new to Mexico, although since is

1930s, the country has enjoyed a period of relative political peace. From 1910 to 1930, however, Mexico underwent the first valid social revolution of this century in which more than a million Mexicans perished. That cataclysmic event resulted in an almost complete reordering of the political, economic, and social structure of the country.

Some Mexicans worry their country may be due for another revolution. That worry may be groundless, but one hears more talk about such a possibility these days than at any time in recent memory.

15 percent unemployment

Unemployment is running at 15 percent and growing. Moreover, the prospect of finding a job is dimming for many young Mexicans, and half the country's population is under 15 years of age.

On the brighter side, Mexico has in the past two decades made remarkable industrial and agricultural strides, maintaining a growth rate that is the envy of most other Latin American nations.

Real growth averaged better than 7 percent through the 1960s, more than 6 percent in the years 1970-74, and a very respectable 4 percent in the recession year of 1975. The rate for 1976 may well total 5 percent, according to preliminary statistics put out by Mexican Government sources.

Even more impressive is the movement of Mexicans up and out of poverty, away from the slums and into the lower middle-class areas of Mexico City, where some of the amenities of the consumer society - televisions, hot water, and even automobiles - are within reach.

"Last year alone, more families got the equipment and facilities for hot water than in the previous three years combined," commented Rodrigo Madrigal, an official in the ministry of labor and social welfare.

The proliferation of television aerials on buildings here is another way of viewing the growth, yet this is beginning to raise all sorts of questions about the quality of life. Mexican young people, particularly university-age students, are questioning the whole direction of Mexican life.

Smog in the world's third largest city

"Aren't we becoming too materialistic?" asks Ana de Bernín, a law student. "Where are the values? Where are the ideals? They seem to have disappeared in a forest of television aerials and dense smog which obscures every-

Her comment on smog strikes home to 12 million residents of this capital city, now the world's third largest

megalopolis after Tokyo and New York. Situated in an 8.600-foot valley surrounded by tall volcanic peaks, the city collects factory smoke, vehicle exhaust-fumes, and other pollutants as no other city in the world.

Get behind a bus or a truck on a street in Mexico City or for that matter on the open highway outside the city and you are in for a "gulp of pure pollution" as Mexicans

"I've got to admit that our vehicular emissions are some of the foulest in the world," says Alvaro Díaz, an official of Petroleus Mexicanos, the state petroleum monopoly.

PEMEX, as the company is known, is more concerned with new oil finds than in controlling emissions, however.

In the past two years, PEMEX engineers have discovered huge quantities of oil in fields all around the country. Mexicans are particularly guarded in their comments about these finds - but they appear "vast, beyond anything we ever believed possible," in the words of a foreign oil-expert close to Mexican oil officials.

If this is so, Mexico could not only ensure continued selfsufficiency in oil, but it could also go beyond that to become a factor in the world petroleum market. That is some years off, but it is nevertheless significant in the Mexican equation. An oil bonanza could force some reassessments of Mexico's total economic picture.

José López Portillo

Such a reassessment, or at least a fresh look at where Mexico is headed, is likely in coming months, as President Echeverría hands over the presidency to José López Por-

The incoming president, a former minister of the economy, is a relative unknown in Mexican politics. His choice to be Mr. Echeverria's successor, announced by the leaders of Mexico's one-party democracy, the Partido Revolucionario Institucional, came as a surprise. Voters confirmed the choice July 4.

The party system is under renewed attack. There is a great deal of disgruntiement as Mexicans complain about the lack of a true choice.

"We're caught in a system that permits no real difference of opinion," complained a lawyer in Guadalajara, Mexico's second largest city (500 miles northwest of Mexico City). "We are merely rubber stamps for the politicians who decide what we will vote on and for whom we will

Ilis criticism is echoed all around this cornucopia-shaped nation of 760,000 square miles.

In Mexico City and even more in the countryside, the complaint is loud and clear: we want more democracy, more freedom of choice.

Right years ago, this cry erupted into the most vocal and open threat to the government since the 1910 revolution. Students at high schools and universities in Mexico City engaged in a summer-long series of rlots, demonstrations, protest marches, and open clashes with police and Army units. The unrest subsided that fall just before Mexico played host to the 1968 Olympics, but not before hundreds of young people were killed, injured, jailed, found missing.

It was an ugly scene. Sporadic clashes between students and police have recurred, but there has been nothing to rival the 1968 disturbances.

Now, however, student dissatisfaction with the system and with the whole fabric of Mexican life is building anew. There are suggestions a new explosion of student unrest might be far more flery than the 1968 disturbances. The better life

Mr. López Portillo obviously is concerned about this un-

"Our system has got to adapt itself to new realities," he said during the presidential campaign. "If it doesn't, we are not giving Mexicans their share in the better life."

But it will be hard for Mr. López Portillo to bring about changes. Many Mexicans doubt he has the will to alter the political system. Even if he has, the weight of the system could make it difficult for Mr. Lopez Portillo to make any fundamental change.

"He has the burden of the past very much with him," said a close adviser of the incoming president. "He knows it, and he also knows a lot depends on how well he responds to change in the early months of his administration."

Mr. López Portillo takes office Dec. I. By that time there will be 63 million Mexicans - almost a .

million more than now. How to feed, clothe, house, educate, and find jobs for the burgeoning population is going to be the new president's biggest problem.

"It is as though we were caught in a whirlwind," commented a government official, "without any idea of how to

"We simply have got to get a handle on the population dilemma. Without that, all else goes down the drain."

Too many Mexicans? Population spiral makes future of Mexico's young uncertain

people

Jacques Brejoux operates one of two existing old paper milis in France

# Ancient French paper mill still churning

By Terry Funk-Antmai Special to The Christian Science Monitor

Puymoyen, France At the end of the narrow dirt road that slices off from the highway near Puymoyen in the western mountains of France, stands Moulin du Verger, one of the two remaining paper mills in the country.

. The silence of the 16th-century village is broken only by the wheel which scoops up water and sends it whooshing through the mill. A few cats in haphazard patterns of black and white play aimlessly on the grass, and wildflowers and ivy splatter the low stone buildings. To walk down the broad steps into the mill itself is to descend through the centuries to a time when handcraft was the only industry.

The visual romanticism is emphasized by meeting Jacques Brejoux, the present owner of the mill. Wearing a dark blue turtleneck sweater, a rubber apron reaching to his boots, and a woolen sailor's cap, Mr. Brejoux is a stocky man who is almost dwarfed in the immense room where he works. Armed with a wooden paddic, he stirs the jelly-like mixture of cotton rags and water circulating in a copper tub that crosses the width of the room.

The enormity of the task of papermaking is concretely expressed in the magnitude of the machinery it requires; The massive beater, the paper press, and the deep vats that hold the final pulp into which the mahogany paper molds are dipped. The process is long and tedious, demanding technical discipline and endurance. A speck of dirt can destroy a sheet; a poor-quality mixture can ruin a costly batch of

Watching Mr. Brejoux work alone, I'm reminded of the engravings found in old books which illustrate the number of workers in the Charente with also founded its museum of per endures," says Mr. Brejoux. de paper.

Brejoux sun uses only wn expense, it still makes the ings and engravings.

Mr. Brejoux explains that having operated the mill for several years now, he is wellknown in the area. This simplifies the job of getting the cloth used for making paper. People write him saying they have an attic full of rags, or a house to be emptied, and often he can collect the tons of necessary cloth without having to go to flea markets or comb the re-

gion.
Collecting material has always been a problem for papermakers and is one of the reasons why early papermakers used a variety of other materials — seed hairs from black poplar; wasps nests, sawdust moss spruce, wood, rye; and cabbage stumps. Until the end of the 18th century, however, white paper could only be made from white rags, and at Puymoyen, Mr. Brejoux still uses only white rags. Despite the expense, it still makes the best paper for draw-

# Ian Athfield's houses 'show people how to remember'

## New Zealander wins world design contest

A man who advocates aesthetic effort and deprecates social effort is only likely to be understood by a class to which social effort has become a stale matter. To argue upon the possibility of culture before luxury to the bucohe world may be to argue truly, but it is an attempt to disturb a sequence to which humanity has long been accustomed.

- Thomas Hardy

The author of "The Return of the Native," who started out as an architect of charming Gothic Revival churches, would have liked Ian Athfield a lot. Like Hardy's main character, Clym Yeobright, the young New Zealand architect, born in the plains city of Christchurch and now living astride one of the harborside hills of Wellington, cares a lot for the kind of insight and initiative that can produce "the possibility of culture before luxury."

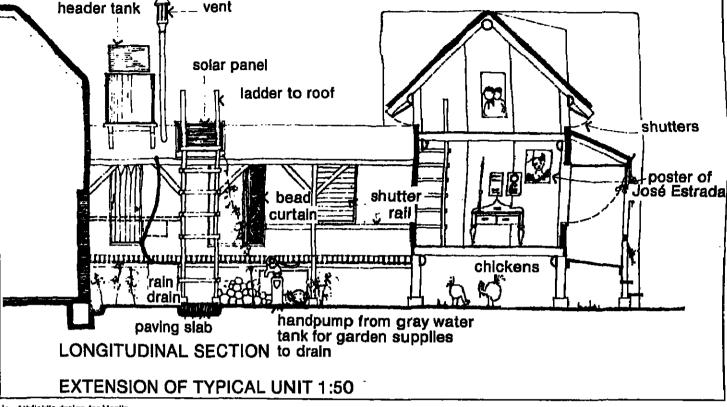

In an era when the world's material abundance has been badly abused, and machines are running humanity ragged, the winner of the first International Design Competition for the Urban Environment of Developing Countries (staged by Architectural Record magazine of New York and focused on the creation lan Athfield's design for Menlis of a 500-family squatter settlement in the landfilled Dagat-Dagatan district of Manila), is determined to make sense, more than money.

As it happens, he has made a lot of the first. and some of the second, since opening his own office in 1968, having been kicked out of a local practice for not being obsequious enough. If hypocritical humility is not his style, neither is lording It over others. His Manila scheme, for example, is a closely knit fabric of familiar materials and forms, based on the use of the native coconut palm tree and its by-products.

"You know, before ripping open the sealed envelope to find out whom they had chosen, everyone on the jury was convinced that a Filipino was behind this design," said Mr. Athfield ideas along with elbow grease, in a process of recently, having never set foot outside New Zealand until his proposed community, or barangay, was a star exhibit at Habitat, the United Nations Conference on Human Settlements in Vancouver, British Columbia, in May, planners, they cannot be a substitute. followed by his visiting New York City.

"The fact the jury thought so is, I think, the best possible compliment. I am going to take behind sleek-surfaced, machine-looled facades, my hammer and saw to Manila and, as I insist is to put the illusion of luxury before the subon doing with my clients at home, the sentiments and suggestions and sweat of the people case, without generating jobs or community who are going to live in the community will be the basis of what is finally built.

ciency are the key things in my concept, as vi- tively in a fold of New Zealand mountains, Mr. tal as the consideration I gave to the layout of the sites, structures, and services. Constructing the barangay, and maintaining it, are tectural form. Though he doesn't go so far as meant to create jobs - not just roofs and walls to suggest, as Butler did, that the products of

With basic pole and roof construction, houses using local material will be easy to add to and quake resistant

In Manila, as in most developing countries where towns and cities have been swamped by migration from rural areas, there are countless numbers who don't even have any scratch from which to start. Athfield means to supply some. His "aesthetic effort," going back to Hardy's description of Clym Yeobright's dilemma, is credible because it embodies a "social effort" in which helping those "least able persons to cope" becomes a plan for engaging native traditions and terrain, activating native cultural as well as economic enhancement.

The two have not often gone together, and while up-to-date technical systems can serve

To stack the urban poor of Manila - or for that matter, of Harlem - in high-fallutin' flats activities as a spin-off of housing construction. Like an inhabitant of Samuel Butler's fic-

# Time to dress your couch in double-knits?

By Marilyn Hoffman Staff correspondent of The Christian Science Monitor

New York Knit fabrics have now overtaken the furniture market just as they overtook both the women's and men's apparel market a few years ago. Knit constructions are now considered to be one of the biggest growth categories in the upholstery fabric field.

For the homemaker, knits mean an uphol-

stery fabric that can "give" and recover; a woven fabric does not. Knits make deep seating possible without crumpled cushions. They tailor well, offer texture or surface interest, and a softer "feel" than many woven fabrics. They cling nicely and wrap and mold easily. If put on properly, there is no seam slippage.

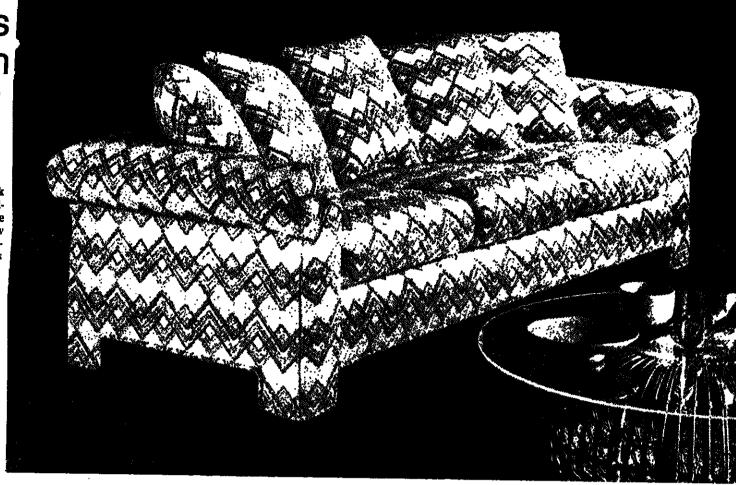

Jerry Wexler, vice-president of Selig Manufacturing Company, says, "The developments in knitted technology are happening very fast, so we can expect to see a real advance in their use. We see a real revolution in knit design and an exciting new style direction evolving out of

Selig is showing new cable-knits and bargello designs in lones of beige and white and gray.

Paul Kando, director of product development for Olympia Industries, Inc., has said, "The upholstery market is ready for knits . . . it uses 499 million yards of fabric a year, and I think that by 1980 almost 20 percent of that yardage will be in knits. But actually the potential of this market is virtually unlimited." Mr. Kando came up with the first "sweater look" in knit upholstery.

closer to a velvet look than any other fabric, though it has a feel all its own. This new "velvet" knit can also have a sculptural effect.

One knil fabric looks like suede, others are stretched fabrics such as brushed nylons, plushes, pliable fake furs, and supple knit-lined Naugahydes. Some reschel knits, with three-dimensional textures (which are achieved by looks. A diamond overstitch pattern by Nov-

There's a rainbow of durable, stain-resistant prints available in knit fabrics utilizing thick and thin bubbly textured yarns), resemble nubby handwoven fabrics.

A high blister double knit has been used on Selig chairs, and knits involving transfer printing are popular with many manufacturers. Leading companies producing upholstery knits include Guilford Mills, Novelty Textile, One new double-knit upholstery fabric comes Fabrics.

Knitting's new impact on the uphoistery market is being seen in both its aesthetic and practical advantages, says Arthur Feinberg, president of Novelty Textile Mills. Warp-type knits have both durability and abrasion resistance, and both warp-type and raschel knits

# Cycling in Switzerland: not all ups and downs

Staff correspondent of The Christian Science Monitor

E CHRISTIAN SCIENCE MONITOR

Chur. Switzerland he man behind the counter at Chur station aks very little English. But with sign lanige a foreigner can get along just fine, and hin minutes can wheel a sturdy, three-speed ycle out into the streets.

For 10 francs (about \$4) the bicycle is yours use as you please for an entire weekend at's what is great for the cyclist in Switzerid: It does not cost all that much to rent a ocipede (velo, the Swiss call it). And you h hire one at any railway station in the count and return it to any other

The first thing you notice in the streets of ur (pronounced "coor") is that you are not ne. Cars are plentiful, and so are bicycles. very young use them, and so do the elrly. One white-haired woman pedals pursefully past you - you're out sight-seeing; p has somewhere to go. There is a man in lar, tie, and topcout, too, obviously going siting somewhere. A young boy pulls a small aller behind his two-wheeler - it is loaded th a bale of hay. Bedding for his rabbits per-

y on your mind is the woman cyclist who a very short while. ertakes you with a vacuum cleaner strapped the back of her bike, its handle projecting this oldest of all Swiss cities is lovely. Archaeyward like an overly thick radio antenna. The Swiss cyclo for fun, but the bicycle, permanent occupation since the Stone Age. Bery clearly, is also a practical mode of trans-

ciate this fact as you tour Chur. You get to see But the sight that imprints itself most indeli- a good deal (even at a very leisurely pace) in old town

In Europe, old is generally beautiful, and ological digs have shown it to be the site of fore the Roman invasion nearly 2,000 years

years of history are packed into the narrow twisting streets and hidden courtyards of the

You see as much as you can in your one day. Then, next morning, with lingering fingers of mist still clinging to surrounding mountain peaks, you set off further afield - to the neighhoring village of Domat Ems, and beyond. There is snow on the mountain peaks, but here ago, Chur was an important center. The name. In the valley it is warm enough for sheep to Somewhere you recall reading that the bi- Chur, is, in fact, Celtic, derived from the word seek the shade. The ubiquitous brown cow of 'cle is the most energy-efficient form of loco- "kora," meaning tribe or race. So thousands of Switzerland grazes in almost every field.

prop in the local economy.

There are newly plowed fields too. Potatoes are a major crop, you later learn, and there are enough orchards - white with blossom and alive with bees - to convince you that fruit is another export of the valley.

But the cableways lining the mountainsides remind you that tourism is the principal reason for the region's prosperity.

Later you stop for lunch at a restaurant that spills outdoors onto a secluded and well-manicured lawn. There you get into conversation with a young couple - he is Swiss, she's English. He worked for five years in England but was "homesick for his beloved mountains," his wife tells you. After several hours of cycling in these beautiful surroundings you can under-

The young man is a junior executive with a company that produces artificial fibers. The factory, one of very few in the mountains, makes use of the timber - the raw material for nylons, rayons, etc. - that is freely available here. People from 80 villages - 80, he stresses, not 18 – are employed there.

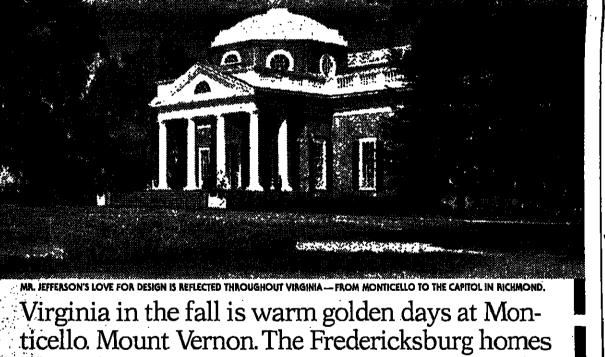

It is too expensive to locate most industries in the mountains, but Emser Werk (the fiber company) is an exception. So Tom, as his wife calls him, feels he has the best of both worlds - a good paying job with industry while living in the sort of beautiful surroundings that have made the canton of Grisons (Graubunden in German) the principal vacation region of Swit-

A paper factory is the only other big industrial employer in the region, and, on a minor scale, there are several saw mills.

Further up, where the valley narrows and the mountains seem to rise more steeply on either side, there is evidence of horrendous erosion. Is this the result of man's poor management of his environment, you wonder. You find later that excessively heavy snows are to blame. Normal snow cover in the region amounts to about 7 feet a year, but in the winter of 1974 almost 30 feet fell on the mountaintons. And in the spring came avalanches.

Where the forest was oldest (200 plus years) there was too much rollen wood, a resident tells you. A few trees would give way, and then with gathering momentum the marauding snow would cut a swath, acres wide, down the entire mountainside. "We lost a lot of timber that year," he says, shaking his head.

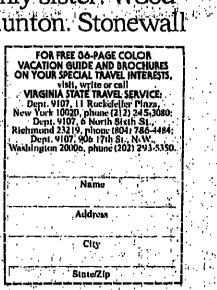

Switzerland's principal languages are German, French, and Italian. There is also Romansh, spoken by a dwindling minority. And every so often the bold English words "Tea Room" becken you inside for refreshment.

# America's 200th birthday, but it's Harvard's 340th

By Stewart Dill McBride Staff writer of The Christian Science Monitor

in the steamy screnity of Harvard Yard, summer students Cambridge, Mass. laze beneath lush elms, slurping cool yogurt as they page through Proust and the sports section. Midday sun glints off the bronze brow of the college's first benefactor, John Harvard, whose statue sternly stares at the trickle of tourists coming to stalk the bicentennial at the nation's oldest college.

They are trudging up the worn steps of Harvard Hall, a red brick lecture hall constructed in 1776. Inside at the new exhibit of Harvard's history called "Minds and Manners" they glimpse what life at the college has been like for the last 340 years. At Harvard, the bicentennial is a bit old hat; the university

celebrated its 200th birthday in 1836. It all started back in 1636, six years after John Winthrop and his rugged band of Puritans founded Boston when the General Court offered half of its yearly taxes for a "nursery of knowledge in these deserts." John Harvard donated his library, half of his estate, and half of his name to the new college in the town of Cambridge, Massachusetts — named after the English

The college was run by fervent Puritan ministers who believed the "main end of life was to know God." To that end students prayed daily at 6 a.m. listened to three sermons a week, and studied Hebrew and Greek so they could read the Bible in its original text.

At the 1976 Alumni meeting, reunion classes gave recordbreaking sums, but fund-raising in the days before Harvard had a business school was not always as successful. In 1640 the college's budget was boistered by revenue from the Boston-Charlestown ferry. Four years later Harvard had to ask all New England families to contribute a peck of wheat or one shilling to their scholarship fund,

Students' hairstyles were even an issue in the 1650s. In 1649, the General Court passed an order registering its "detestations with long hair after the manner of rufflans and barbarous Indians" which was beginning to "invade New England contrary to the rule of God."

Much like Old Guard alums, who today raise their eyebrows at the "liberalization" of their alma mater, conservative religionists in the late 17th century protested against the liberal leanings of the college. The dispute finally prompted the 1701 founding of a competing institution of higher learning in New Haven, Conn. — Yale University.

## Manners not math

In the early days of the college when aristocratic families sent their sons to Harvard to learn manners (not mathematail air-conditioned? ics) students were listed, not alphabetically, but by their famlly's social rank. In the interest of academic freedom, the collego taught the Tories and Patriots alike from Thomas Hutchinson to John Hancock.

Cambridge at that time was a stronghold for wealthy loyalist merchants and Brattle Street was dubbed "Tory Row." Nevertheless, most of the students in the mid-18th century sided against the British, demanded their degrees be printed on American paper, abstained from drinking imported tea, and wore homespun suits to graduation. In 1775 a student riot broke out in the College Commons when a small group of Tory undergraduates brought some forbidden tea into the dining

During the 9-month siege of Boston, Harvard held its classes in Concord and turned its dormitories into barracks for the Continental Army serving under Gen. George Washington, who was headquartered on the Cambuldge Common. When the British dista Buston in March will lide to be successful to

Etching of Harvard's bicentennial celebration in 1836 school, was founded. For years the Harvard faculty walked up James Agee, and Aga Khan IV (spiritual leader of more than

#### Gertrude Stein

Still circulated around the colleges is the story of the empty exam booklet Gertrude Stein handed in to Professor William James. In it she wrote: "Dear Professor James: 1 am so sorry but I don't really feel like an examination paper in philosophy

Professor James returned the exam with the following note: "Dear Miss Stein: I understand perfectly how you feel. I often feel like that myself." He gave her the highest mark in the

the academic heap. After World War II, the best of the Sputnik generation flocked to its hallowed halls. President John Kennedy recruited four of Harvard's "best and brightest" to serve in his Cabinet, only to be outdone by President Ford who put five Harvard men in his Cabinet.

Harvard became an academic superpower, claiming such alumni as Henry Adams, Leonard Bernstein, T. S. Eliot,

Garden Street and repeated to the women the lectures they 20 million Muslims). Even the university's list of dropouls is distinguished: Robert Frost, Buckminster Fuller, Pete Seeger. William Randolph Hearst, and Edwin Land (who dropped out twice before inventing the Polariod camera).

#### 'A few days in April'

In the 1980s, however, the Vietnam war shook the university's confidence both in itself and in its Washington alumni. A student strike in 1969 closed down the university and prompted one dean to remark: "It's hard to believe that something put together over a third of millennium by Harvard men can be destroyed in a few days in April."

In the 20th century Harvard opened its graduate schools of sible to understand by leaving Harvard Hall's "Minds and business, law, and medicine and hudged its way to the top of Manners wall with the law and medicine and hudged its way to the top of the law and medicine and hudged its way to the top of the law and medicine and hudged its way to the top of the law and medicine and hudged its way to the law and hudged its way As for Harvard's reputation today, perhaps that is only posdents and visitors. If you had been in Harvard Yard a few days ago on that steamy summer afternoon you might have heard this conversation between a Midwest couple:

"So this is Harvard. My word," said a young woman. "What's so great about this place anyway?" her husband

"Haven't you heard about their glass-flower museum?"

clues the experienced crater counter looks for In 1971, Mariner 9 went into orbit around Mars It radioed back the first clear pictures of the Red Planet's surface. But when the crafer counters fixed the techniques which had worked so well on the moon, they got a confused picture. Mars, with even its thin atmosphere, did not present the same cratering history as did the airless moon.

The crater counters' next opportunity came with Mariner Venus-Mercury. It took the first close-ups of the innermost planet in March,

"Everyone expected Mercury to be the key to Mars," says Dr. Cutts.

The two planets have virtually the same gravity, so the energy which meteorites gain from plunging into the surface should be the same. And the size of the craters they leave should therefore be comparable. Also, Mercury has little atmosphere to wear down craters. So the scientists hoped it would link the history of the moon and Mars.

Unfortunately, Mercury did not connecate. Either it is just made out of much different stuff or the meteorites present close to the sun cons ago were much different than those farther out in the solar system. But the picture Mercury presented also turned out to be "a little confused," admits Dr. Cutts.

Already the Viking pictures have revealed why Mars seems to have a peculiar mix of eraters. On the Red Planet, some newly formed craters clearly have been buried by windblown dust and uncovered epochs later, says Dr. Cutts. This can make ancient craters look much younger than they really are, he explains.

## At last a star on Paula Trueman's door

By David Sterritt

If you've seen Clint Eastwood's latest western, "The Outlaw Josey Wales," you have doubtelessly been impressed by Paula Trueman's feisty performance as a Wild West grandma struggling across a hostile land with as much bravery as the handsome gunfighter who helps her.

It is a demanding role, but Miss Trueman seizes it by the horns and wrestles it into submission with her very first words. She becomes one of the most refreshing oases in a picture whose other episodes lapse sometimes into meaningless violence.

Miss Trueman's success with the part is no surprise, however. Though she has never achieved star status, this sturdy character actress has been gathering experience for decades. She is representative of many veteran performers who make skill, rather than stardom, their primary goal. She has made her talents the base for a long and often deeply rewarding career.

"I never dreamed about being a star," Miss Trueman confessed over lunch at Sardi's, in between interrruptions by friends and colleagues who spotted her at the famed show-biz restaurant. "I wanted to be at the top, but in the sense of being awfully good - doing what I do awfully well. I never thought about this business of being accepted in the world as a

A couple of years ago, the Trueman career edged close to stardom in the celebrity sense. She played the leading role in a bizarre comedy called "Homebodies," directed by Larry Yust, which was actually chosen for exhibition at the Cannes Film Festival. Then something went wrong - even Miss Trueman doesn't know what — and the movie was never distributed beyond Cincinnati, where it was made. Its whereabouts became one of the mysteries of Cannes, where it failed to show up, and Miss Trueman's shot at international fame faded.

Since then she has kept busy, though. A speaking role in "The Stepford Wives," a day of shooting for Woody Allen's latest comedy, her supporting part in "Josey Wales." Says the actress, "There are few parts these days for older people, though 'character' parts used to be a staple. So it's difficult. But new things, such as TV and commercials, open up more opportunities.

"It gets more difficult as you get older," she continues, "because opportunities are more limited. But 1 did commercials when a lot of my theater friends turned up their noses at them. Then, after a few years, they tried and couldn't get jobs - because they couldn't do that kind of work "

It is typical of Miss Trueman to extend her energy and scriousness even to the realm of the TV commercial for Joy, Tide, Quaker Oats, and IBM. "They aren't easy," she insists, the form of a letter to her friend, Fanny Brice, winking her sharp Ruth Gordon-type eyes. and dealing with another of her many talents: "You have to be able to seize a moment. It's a . sewing. one-minute thing, or even a 10-second thing. So in a very brief time you have to snap into it and give a picture. It's a particular technique. I had very good training for that - trying to make the best of little parts when I worked for a repertory company."

Veteran actress Paula Trueman in the movie 'The Outlaw Josey Wales'

because each has its problems, and I like to adapt my technique to each situation."

The Trueman carear started "a long, long time ago. I was a dancer. Before I danced professionally, I taught for a while. One summer I danced with Fokine's ballet, and at the end of the summer I just didn't go back to school." Miss Trueman 'wasn't crazy about teaching anyway," and "wouldn't want to fall back on teaching acting," preferring to get through "drought periods" by spending money saved up during active periods.

"I love dancing and still love it more than anything else," the performer continues. "But I became an actress and joined a repertory company at the old Neighborhood Playhouse. ... We did about six productions a year, ballets and plays, and I did all of them."

This turn in her career amazed Miss Trueman as much as anyone else. As a young girl she had wanted to be a writer, and she fondly remembers an article with pictures that she. published later in Vogue magazine - written in

Looking at today's entertainment world from her vantage point of long experience, Miss Trueman starts by lamenting the state of the theater. "It has changed so much. There are fewer plays nowadays, and I don't like the kinds of plays they're doing, and I don't like To Miss Trueman, entertaining is an art, no the way they're doing them. I don't like the

also don't like the shapelessness of the acting. | land in anything." (Nov. 19) The letters are a It's not crisp, it's not definite. It's vague, it has

a feeling of improvisation.
"And that "isn't the theaters And that isn't the art! You start with improvisation, but you end from the rest of the judicious selection by their up with discipline and form and a definite outline, a definite accomplishment."
Here Miss Trueman stops her criticism.

"That's as far as I'll go," she announces with a smile. "I'm not crazy about talking about acting. . . . Styles change, and I've changed my own style over the years. I'm not talking about anything static. It's just the whole idea of discipline, form. . . . It's the same thing in any

As for the movies, Miss Trueman objects to the "indirect and arty way so many films today have in telling their story." But nonetheless, "I love movies. I'm fascinated with them as a medium. They present a bigger scope than the theater, which is limited by the stage, and the human beings standing on their feet on that stage. In the movies you can do any-

Miss Trueman's life has always gravitated toward the arts. Even her summer home, situated attractively on Long Island's South Shore waterfront, was designed by her late husband, the architect and painter Harold Sterner. The actress feels that she must have been "born with" her many gifts and interests. During her childhood, her artistic leanings were neither frowned on nor encouraged. "I was just an inmatter what the circumstances. "I find every formicssness of them. I prefer a definite dividualistic person," she recalls. "I lived in smiddle-and-end al my own world. That's just the way I am."

# Letters from

per, £3.70. New York: The Viking Press. \$18.95. Paper, \$5.95. 440 pp.

ters from the three previous volumes published in 1957 and 1966. Professor Ellmann now judiclously includes all the well-known letters from Joyce's early appreciation of Ibsen to his refusal to join Yeats's Academy of Irish Letters, as well as letters from the Joyce of Trieste. Zurich, "Ulysses" and the "Wake."

The selection boasts inclusion of 10 new letters and full restoration of many previously incomplete, including a suite of love letters to Nora Barnacle. Joyce visited Dublin twice in 1909, each time sending almost daily epistles to Nora in Trieste. During his second stay in autumn, 1909, his correspondence bursts with an energy and veracity absent in his later, more brittle and posed letters. He moves among the raw materials of his books: the streets of Dublin, his friends Byrne, Gogarty, and Cosgrave. all of whom appear under different pseudonyms in his fiction.

The letters also yield a remarkable consistency in being composed for one person within a fairly short time - August to December, 1909, with 15 letters falling in December alone. "I felt (as I always feel) a stranger in my own country," he observes on Oct. 27, "I loathe Ireland and the Irish." Then in a Dublin hotel where Nora once worked he says, "I have lived so long abroad and in so many countries that I can feel at once the voice of Irediamond mine of Joyco's unpremeditated responses on the grid of Dublin.

One senses that there has been a profound betrayal of Joyce in the publication of such unflinching communications between a man and a woman. Professor Elimann justifies inclusion of these new letters and fragments by citing "Joyce's avowed determination to express his whole mind" – precisely what Joyco did in his books, his fictions given out. One scarcely belleves that Joyce's aesthetics have been played out to the point where critics must borrow from the artist's personal affairs. But then the moral climate has altered since Ellmann's 1959 'biography," and personal privacy has all but ceased to be a right.

Others, more fortunate than Joyce in this respect, have contrived to escape as they may. S. Ellot refused to authorize a biography. And not 30 miles from Professor Elimann's New College at Oxford, the carved flagstone in the weathering chapel reads: "The friend for Jesus sake forbeare. , . ."

presidential campagn. It is not known here whether there are any Cuban military advisers in Mozambique. Rhodesian Minister Edward Sutton-Pryce recently charged that Cuban as well as Soviet and Tanzanian advisers were helping guerrillas in Mozambique.

seen as a deliberate effort to take advantage of the American

As Rhodesia looks more and more embattled, Moscow combines its aid to the guerrillas with pointed diplomatic approval of Rhodesian black leader Joshua Nkomo.

Moscow's aim appears to be pro-Soviet black governments in both Rhodesia and Namibia, leading to more leverage against the white regime in South Africa.

When Mozambique President Samora Machel visited Moscow May 17-24 of this year, the final communique said Moscow had agreed "to render assistance to Mozambique in consolidating its defense capability." This is thought here to have been followed by shipments of light arms, rifles, and perhaps even surface-to-air hand-held rocket weapons.

As for South Africa, Prayda has binted that the Soviet line will be to brand the Vorster government illegal, to support the banned African National Council, but prudently to stop short of any overt move against the South Africans that could cause the United States serious concern.

Moscow has sharply criticized the visit by Secretary of State Henry A. Kissinger to Africa earlier this year and sought to blunt new U.S. sympathy for black majority rule throughout ment for help against outside aggression (South Africa). No southern Africa.

# Sakharov sees bleak future for human rights in U.S.S.R.

set up fresh talks between all sides.

far with its military aid in southern Africa.

By Elizabeth Pond

Staff correspondent of The Christian Science Monitor

Nobel Prize-winner Andrei Sakharov is pessimistic about the future of human rights in the Soviet Union. But he continues to fight for it as a moral imperative.

In a retrospective interview the foremost Soviet human rights activist: Described the Soviet intelligentals as broadly sympathetic

to dissidents but too straitjacketed to show it. · Perceived no serious gap between the intelligentsia and the man in the street.

• Saw little hope that the next generation of political leaders might allow more freedom here. · Indicated that if he had his career to live over again, he

would still choose the path of human rights. Dr. Sakharov's pessimism is both chronic and acute. In 1968,

when he issued a manifesto urging democratization in this country, he hoped that other Soviet intellectuals would join his campaign and set off a liberal evolution here. This hope faded with the Soviet invasion of a liberalizing Czechoslovakia and the subsequent crackdown on dissent inside the Soviet Union. Recent developments have confirmed this long-term trend,

in Dr. Sakharov's experience. In the past year four of his friends and human rights col-

leagues have been sentenced and juiled: Andrei Tverdokhleboy, Sergei Kovalov, Viadimir Osipov, and Mustafa Dzhemilov. Harsher conditions have been imposed on political prisoners inside labor camps and jails, and restrictions have been made Violence that Dr. Sakharov says appears to have been in-

spired by the KGB secret police has led to the deaths of Konstantin Bogatyryov, the foremost Russian translator of Riike; Evgeni Brunov, an unemployed lawyer who appealed to Dr. Sakharov for help after alleged persecution for defending the exiled author Alexander Solzhenitayn in a letter; and other in-

Similarly, academician Dmitri Likhachov and Mr. Tverdokhlebov's friend Nikolai Kliuchev were, the victims of serious physical assaults. Dr. Sakharov regards these incidents and physical threats

Mr. Nujoma faces some opposition from less radical leaders

Western sources say sending in Cuban troops to Angola was

portrayed as a response to a request from a legitimate govern-

within SWAPO, but he is thought to be highly influential. At the

same time, Moscow is thought here to be careful not to go too

against other independent-minded intellectuals as an attempt to keep the active dissidents in a vacuum, separated from the rest of the intelligentsia.

Among the intelligentsia, Dr. Sakharov believes, there is a general yearning for more freedom.

Human-rights activists are only a "very narrow layer" of intellectuals, Dr. Sakharov explains, since "even the smallest step of nonconformism" often leads to a person's being cast out of normal society and his normal professional life.

Nonetheless, Dr. Sakharov senses a "deep Inner Interest" in human-rights issues on the part of intellectuals, as a matter of "self-respect. Without a doubt, in the inner spiritual life of society, interest is very wide," he asserts.

Dr. Sakharov has received expressions of sympathy from truck drivers and other workers, as well as from intellectuals. He concludes that the gap between intellectuals and the man in the street is not so great today as it was in 19th-century

"The attitude of anti-intellectualism which exists now creales very serious problems for the whole society," Dr. Sakharov contends. He includes among these problems lack of a sense of purpose, drunkenness, and what he sees as increased discrimination in selection of students for higher education. He holds that society as a whole would benefit from a freer and more relaxed atmosphere for intellectuals.

Whatever the demands of rationality, however, he doubts that the attitude here would change, even with a new generation of political leaders. "In a bureaucratic system every

generation simply reproduces itself," he observes. On the other hand, he considers a return to Stalinist purges and accept social ostracism. "The logic of life and events unlikely, if only because "tragedies of such a large scale do

not happen that often."

In spite of the bleak practical outlook for human rights, Dr. allon" was most in Sakharovidoes not regret his decision to become an activist, the costi....

# Why Cape Town's 'favored' Coloreds want more

By June Goodwin Staff correspondent of The Christian Science Monitor

Cape Town The people in South Africa who were supposed not to rebel have joined the blacks.

So far the outcry is at student level. It comes from the Coloreds (people of mixed race) in sophisticated Cape Town, where race relations were presumed to be less tense than in the rest of the country.

Unrest began carly in August on a day of declared solidarity with Soweto, the black township near Johannesburg where 176 people were killed in June. Soweto has become a symbolic word, especially to students - in this case students at the Colored University of the Western Cape (UWC).

The UWC students were confronted with police; they burned a building on campus. Then the three black townships near Cape Town exploded and 29 blacks were killed, according to official count.

The government was so unprepared for the outbreak that 130 police had to be flown in from other parts of the country along with the Johannesburg commandant, who handled the Soweto riots.

flow could this happen? Many whites wondered. The Coloreds in the Cape are in a favored position: They are given jobs before blacks, they can own their own houses, they are affectionately called brown Afrikaners by the ruling white Afrikaner, who is of Dutch descent.

But the 2.2 million Coloreds are a race in between, a mixture in a society that tries to put everybody in a specific racial box. A Colored person can have blond hair and blue eyes, or he can be as black as a Zulu.

The first type sometimes passes for white in Cape Town soclety. "But we so-called Coloreds can always tell each other," said the Rev. Abel Hendricks, president of the Methodist Church. "I don't know how, maybe the insecurity in the eyes."

Close observers predict that opposition to the government has just begun, because the lot of the Coloreds has grown sleadily worse since their parliamentary vote was taken away by the National Party about 25 years ago - because the Nationalists saw the Colored vote could soon unseat them. Police are standing by in Cape Town in case unrest moves

Olympic problems that need to be met before 1980

By Larry Eldridge

THE CHRISTIAN SCIENCE MONITOR

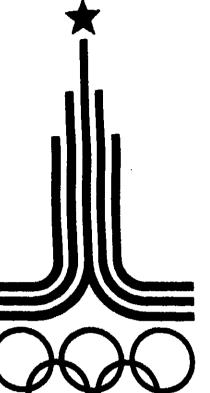

It's never too early to look ahead toward the next Olympics, so as we close the books on Montreal it is already time to think about 1980. And the first thing a lot of people are thinking about is how to cope with the multitude of political and social problems that beset the games so regularly nowadays.

One old idea which surfaced again during this year's troubles was to use the Olympic flag and anthem instead of those of the individual nations. At first this might sound like a good idea for curbing the rampant chauvinism at these quadrennial celebrations, but in actuality it might be one of those solutions that is worse than the problem.

Anyone who has been at the Olympics knows what a moving and memorable moment it is when his country's learn marches in, or when an athlete from his nation wins an event and they raise the flag and play the anthem. The athletes feel this too. Many of them (including some now starring in the pro ranks) have told me that playing for their country was the No. 1 thrill in their entire careers.

Take all this away, and the Olympics would become just another blg track meet, swimming competition, or whatever. Anyway, the problem doesn't lie with flags or anthems. There's nothing wrong with an athlete competing for his country as well as for himself. It's just that certain nations, like the Soviet Union starting shortly after the war and East Germany now, have made such an obsession out of winning medals that they have perverted the whole Olympic ideal.

The United States isn't exactly blameless either, for while it doesn't have statesupported sports programs its officials and media types can wave the flag with anyone - and let's not forget that they

Symbol for 1980 Olympics

were the ones who started the whole problem by making such a fetish out of counting medals. Somewhere along the way all of these

countries lost sight of Baron Pierre de Conbertin's original concept that "the most important thing in the Olympic Games in not to win but to take part."

Unfortunately, no one has yet found a way to stop a country from ignoring that ideal — and once this happens its rivals can seldom resist the temptation to try to

keep pace. I think the answer, though, is to cope with such distortions as best we can, not try to change the whole format

For one thing, the U.S. Olympic Committee could try a little harder to improve its own programs instead of just rationalizing all failures on the grounds that Eastern European-style sports assembly lines don't fit the mold of a free society.

Obviously it wouldn't be feasible to try to set up such a system in the United States, but this doesn't mean - as the USOC seemingly would like us to believe - that national development programs are some sort of communist plot.

Countries like Austria, Switzerland, and France spend millions each year on their sking programs with an eye toward the Winter Olympics, illustrating quite clearly that you don't have to live in a regimented society to develop a strong national team in a particular sport

While the USOC wrestles with this problem over the next four years (and according to some of its own athletes, if something isn't done quickly American teams face potential disaster in Moscow four years hence), the International Olympic Committee has its hands full trying to find solutions to the various delicate political problems confronting it.

High on the list, is the "China question," which threatened for a while to wreck the Montreal games. Sentiment has been growing to allow mainland China and its 800 million people into the Olympic movement, but so far a majority of mentbers has stopped short of fulfilling Peking's demand that Taiwan be simultaneously kicked out.

"Solving this problem is uppermost in my mind," IOC President Lord Killanin said in his post-Olympics press conference, but he did not indicate that he had as yet come up with any solution.

"What happened here (Canada's lastminute refusal to let Taiwan compete as the Republic of China), highlighted the question," he said.

Taiwan's withdrawal and the boycott by 30 African and Arab nations once again raised the question of letting athletes compete under the Olympic flag if for some reason they can't compete for a country. This came up polgnantly in Montreal when sprinter James Gilkes of Guyana made just such a request after his country pulled out. Many people thought this was a chance for the IOC to establish an important precedent enhancing the sporting aspect of the Olympics and making them less nationalistic, but Gilkes' application was rejected.

Killanin, questioned sharply about this decision at his press conference, said the IOC had been "emotionally anxious to do the best we could," but had been prevented by technicalities from making any

The question is also being raised already as to how the IOC will react if the Soviet Union in 1980 follows Canada's lead and tries to bar or place restrictions on countries with which it is not friendly (Israel and Chile are the leading candidates).

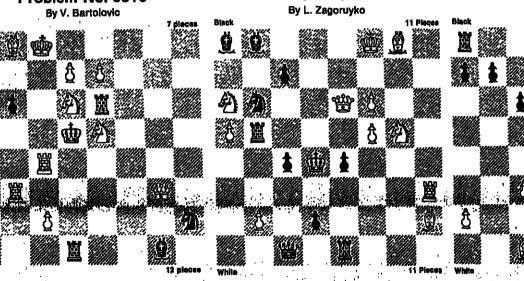

Killanin reaffirmed at his news conference that the Russians have given assurances they will go by the IOC's rules, and when pressed with a hypothetical question about what would happen if they didn't he said: "If promises are not fulfilled, the Games will have to be withdrawn or cancelled."

One can only hope that the IOC somehow resolves the China question without sacrificing a member in good standing (Taiwan), finds a way to prevent last-minute boycotts like the one in Montreal, decides to let athletes compete under the Olympic flag in special situations, and lets the Russians know in no uncertain terms that despite its wishy-washy performance in giving in to Canada, any failure to abide by the rules in 1980 will cause cancellation. If it accomplishes even some of these things, the four years between Olympics will have been productive ones.

ruflichen Tätigkeit nachgeht.

krieg entgegen I

Disant que la redécouverte de l'esprit occidental dépend des Etats-Unis, M. van der Post poursuivit :

 Je crois que les Etats-Unis ont une vraie passion pour la recherche des Les forces en faveur d'un change- solutions justes. Je crois que la façon dont ils se sont exposés au monde extérieur par l'affaire du Watergate . . . n'est pas un signe de faiblesse mais d'une immense force spirituelle. Je crois que les Etats-Unis désirent vraiment uno réponse spirituelle et que par con-

séquent, en fin de compte, cette redépouvoir, cette puissance gigantesque, non comme un géant mais dans l'intérêt du monde et de l'humanité. »

M. van der Post, qui fut fait prison-nier de guerre en 1942 par les Japonais dans l'île de Java, dit que c'est cette expérience de prisonnier de guerre qui l'a fait décider en son for intérieur quelles sont les choses de la vie qui ont le plus d'importance.

Mais ce fut avant la seconde guerre mondiale, quand il avait 21 ans, qu'il fut le premier à écrire un livre qui s'élevait contre le préjugé racial en Afrique du Sud. Il grandit là-bas, où ses ancêtres étaient allé vivre il y a plus de trois cents ans. Issu d'une famille de quinze enfants, il vécut dans une ferme en plein cœur du conservatisme afrikander. où il acquit une connaissance approfondie des relations entre les descendants des colons hollandais et les noirs.

M. van der Post dit qu'il pense que les blancs de Rhodésie ont tort, et que la politique de l'Afrique du Sud est mauvaise. « Mais toute mauvaise qu'elle soit, je ne pense pas qu'elle le soit au point de justifier les tueries et le terrorisme [par des guérilleros].

« Elle peut être changée autrement ». dit-il. «Si six millions de Rhodésiens noirs sont vraiment unis et s'ils veulent vraiment changer la vie sociale en Rhodésie, ils peuvent le faire sans violence, et ils peuvent le faire en quelques mois en s'abstenant tout simplement de travailler.

« En Angola une minorité d'étrangers a pris le pouvoir. L'Angola est bien plus une colonie [maintenant] qu'il ne l'a jamais été au cours de ce siècle. Il a été recolonisé, et tout le monde est sur la réserve. Si vous étiez Rhodésien, et que vous voyiez que le système électoral d'une voix par homme est utilisé pour imposer la dictature d'une minorité [noire], seriez-vous prét à vous soumettre à un avenir comme celui-là? Et de plus, serait-il juste de le faire? Serait-il juste vis-à-vis du reste des Africains de les livrer à une forme inférieure de tyrannie ?

« Vous pouvez avoir un gouvernement de la minorité qui soit infiniment plus démocratique qu'un gouvernement de la majorité. Vous pouvez dire que la Russie a un gouvernement de la majorité — ils obtiennent 99½% des voix lors des élections. »

La démocratie est la forme de gouvernement la plus difficile qui puisse exister. C'est pourquoi il est si difficile de la faire marcher. Et c'est pourquoi elle marche si mal. Parce que c'est un état d'esprit avant de devenir une celui du monde, dépend de ætte m machine à voter. Et c'est l'état d'esprit le plus avancé qui puisse exister parce qu'il présuppose que vous avez un type d'individu qui a un lien individuel avec une vérité universelle... et qu'il ne remettra pas sa conscience individuelle entre les mains d'une majorité quelconque dans l'intérêt de la majorité.

« Et ce type d'individu n'existe pas sur la scène africaine sauf en très, très, croissance; alors il serait vraiment bon très petite quantité.

Laurens van der Post

« Voici ce qui m'encourage plus que tout autre chose au monde - celes où que j'aille dans le monde je trom un nouveau type d'être human qu appartient déjà à un monde qui maix pas encore. Nous n'avons pas le intitutions pour l'exprimer, mais el vient... L'avenir de l'Afrique, comm velle humanité que l'on essaye créer et c'est ce que j'essaya de servir!

« A moins que des changements et viennent de l'intérieur de l'étre humais, il n'y a pas de changement du lout, C'est ce qui m'ennule dans tout le contexte africain. Le changemai, et in posé de l'extérieur et ne vieil per doucement comme un processe de et serait vraiment l'Afrique.

## Ne craignez jamais la crainte!

La crainte peut être un vrai poison dans notre existence de tous les jours ou elle peut être simplement une pensée négative qui, renversée, peut indiquer que le bien est à nortée de la main. Qu'elle soit l'un ou l'autre dépend de la façon dont nous la ffaitons, comment nous y réagissons. La vérité c'est que nous n'avons pas besoin de

erandre la crainte 1 Peut-être nous sentons-nous parfois comme Job alors qu'il cherchait encore à tatons un point d'appui pour sa foi. Les pires choses semblaient lui arriver. Il lui semblait impossible d'échapper au mal. Il s'écria angoissé : « Ce que je crains, c'est ce qui m'arrive. • 1

Job trouva sa réponse, cependant, ainsi que le sait quiconque connaît cette histoire. Quand il apprit à se métier des convictions qu'il s'était créées quant au mal présent et futur, quand il apprit à accorder plus de foi à la réalité de Dieu et de Sa création qu'il n'accordait à ses craintes, et quand il pria pour ses amis avec désintéressement, « l'Eternel rétablit Job dans son premier état ».'

La Science Chrétienne\* à « rétabli dans leur premier état « bien des personnes en les aldant à rejeter la fausse croyance on elles entretenaient d'être séparées de Dieu et de la sécurité, de la paix et de l'assurance protectrice pleine d'amont, qui est le résultat naturel de la réalité de

Pexistence constuelle Le mos reel de l'homme est l'enfant de Dieu, la ressemblance spirituelle de la Vérilé et de l'Amour divins. Il ne peut connaître aucune autre réalité que la perfection de la création divine. Les craintes qui assaillent la pensée humaine ne peuvent contrecarrer les conditions de cette création. Ce qui est spirituellement vrai ne peut être modifié par les impressions, les pressentiments de malheur ou même les convictions établies de l'entendement humain. Dieu est bon et la source de tout blen et l'être réel de chacun de nous est sous Sa garde.

Que faire alors de notre sens humain de crainte? L'ignorer? Vivre notre vie de la meilleure façon possible en dépit de cette crainte? Ce n'est pas suffisant. La Science Chrétienne ne me pas la nécessité de surmonter la crainte, mais elle réitère ce que la Bible fait ressortir à maintes reprises, à savoir que rien ne peut séparer l'honane, dans son être réel, de l'amour de

Mary Baker Eddy. Découvreur et Fondateur de la Science Chrétienne, n'ignorejamais les craintes que nons ressentons, ne méconnaît jamais leur emprise sur notre sens humain des choses, mais à travers ses écrits elle montre que cette emprise n'est pas réelle et qu'on peut lui faire face d'une façon efficace grâce à une compréhension de la vraie nature spirituelle de notre être. Elle dit : « La crainte n'a jamais fait cesser l'être et son action. »' Dieu nous importe plus que la crainte la plus virulente. La réalité de notre être résiste toujours, quels que soient les arguments qui engendrent les croyances au mal. Nous sommes ce que nous sommes les enfants de Dieu, environnés par l'Amour divin, tenus sains et saufs dans les liens de la perfection spirituelle.

Nous ne pouvons être séparés de Dieu.

Nous pouvous avoir infimment plus confiance en Lai que dans les craintes que nous ressentons on les croyances que nous entretenons momentanément. Et nous pouvons avoir confiance dans la réalité spiriluelle de notre unité parfaite avec Dieu. En remolaçant la crainte par une compréhension plus profonde de Dieu et de l'homme en tant que son expression parfaite et spirituelle, nous pouvons nous réjouir du bien qui est toujours accessible.

Fürchten Sie niemals die Furcht!

#### lich weitermachen? Das ist nicht genug. Die Christliche Wissenschaft\*,,wandte Furcht kann eine Qual in unserem täglidas Geschick" vieler Menschen, indem sie ihnen half, die falsche Annahme zu ver-

chen Leben sein, oder sie kann einfach ein negativer Gedanke sein, der, wenn er umgekehrt wird, auf das bereits vorhandene Gute hindeuten kann. Ob sie das eine oder andere ist, hängt davon ab, wie wir die Furcht meistern, wie wir auf sie reagieren. In Wirklichkeit brauchen wir die Furcht nicht zu fürchten!

Wir mögen uns manchmal wie Hlob vorkommen, als er noch einen Halt für seinen Glauben suchte. 1hm schienen die schlimmsten Dinge zu widerfahren. Es schien ihm einfach nicht möglich zu sein, dem Bösen zu entrinnen. In Seelenqual rief er aus: "Was ich gefürchtet habe, ist über nuch gekommen.

Hiob fand jedoch scine Antwort, wie jeder weiß, der die Geschichte kennt. Als er lernte, seiner von ihm selbst gehegten Uberzeugung, Schlimmes erwarte ihn in der Zukunft und habe ihn jetzt betroffen, zu mißtrauen, als er lernte, der Wirklichkeit von Gott und Seiner Schöpfung mehr Glauben zu schenken als seinen Befürchtungen, und als er solbstios für seine Feinde botote, "wandte [der Herr] das Geschick Hiobs".

werfen, daß sie von Gott und von der Sicherheit, dem Frieden und der liebevollen Gewißheit des Schutzes, die ein Verständnis von der Wirklichkeit des geistigen Daseins ganz naturlich mit sich bringt, getrennt seien.

Das wahre Selbst des Menschen ist das Kind Gottes, das geistige Ebenbild der göttlichen Wahrheit und Liebe. Der Mensch kann keine andere Wirklichkeit kennen als die Vollkommenheit der Schöpfung Gottes. Die Befürchtungen im menschlichen Denken können auf die Zustände dieser Schöpfung nicht störend einwirken. Was geistig wahr ist, kann durch die Eindrücke, die bösen Vorahnungen oder selbst die festen Überzeugungen des monschlichen Gemüts nicht verändert werden. Gott ist gut und dic Quelle alles Guten, und das wirkliche Sein eines jeden von uns ist Seiner Fürsorge anvertraut.

Was sollen wir dann mit unserem menschlichen Begriff von Furcht tun? Ihn ignorieren? Trotz allem so gut wie mög-

Die Christliche Wissenschaft leugnet nicht die Notwendigkeit, die Furcht zu überwinden, sondern sie wiederholt, was immer wieder in der Ribel betont wird, nämlich das nichts den Menschen in seinem wahren Sein von der Liebe Gottes trennen

Mary Baker Eddy, die Entdeckerin und Gründerin der Christlichen Wissenschaft, ignoriert niemals die Befürchtungen, die wir haben, unterschätzt niemals ihren Einfluß auf unsere menschliche Daseinsauffassung, sondern zeigt überall in ihren Schriften, daß dieser Einfluß nicht wirklich ist und daß wir ihm wirkungsvoll mit einem Verständnis von dem wahren, geistigen Wesen unseres Seins entgegentreten können. Sie sagt: "Furcht hat das Sein und seine Tätigkeit noch niemals zum Stillstand gebracht." Gott ist mehr für uns als die schlimmste Furcht. Die Wirklichkeit unseres Seins bleibt bestehen, ganz gleich, durch welche Argumente die bösen Annahmen gestützt werden mögen. Wir sind, was wir sind - Kinder Gottes, von der göttlichen Liebe umgeben, gebor-

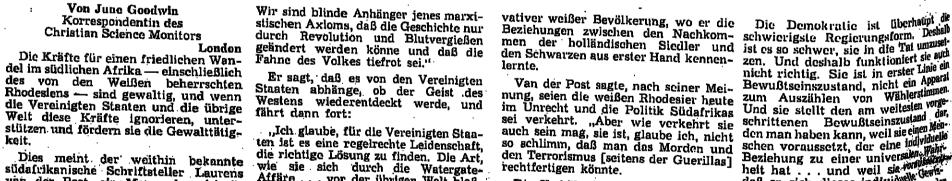

gen in der geistigen Vollkommenheit. Wir können nicht von Gott getrennt sein.

Wir können Ihm weit mehr vertrauen als den Befürchtungen, die wir haben, oder den Annahmen, die wir im Augenblick hegen. Und wir können auf die geistige Wirklichkeit unserer vollkommenen Einheit mit Gott vertrauen. Wenn wir Furcht durch ein tieferes Verständnis von Gott und vom Menschen als Seinem vollkommenen, geistigen Ausdruck ersetzen, können wir zufrieden sein mit dem Guten, das immer zur Hand ist.

Never fear fear!

which I greatly feared is come upon me."

to distrust his self-sustained convictions of hand evil in the future and at hand, when he 'Job 3:25; 'Job 42:10; 'Science and itealth learned to give more credence to the reality of God and His creation than he gave to his fears, and when he unselfishly prayed for his friends, "the Lord turned the captivity of

Christian Science has "turned the captivity" of many by helping them reject the false belief of their being separated from God and from the security, peace, and loving assurance of protection that naturally follow an understanding of the reality of spiritual exis-

Man's true selfhood is the child of God, the spiritual likeness of divine Truth and Love. He can know no other reality than the perfection of God's creation. The fears in human thought cannot interfere with the conditions of that creation. What is spiritually true cannot be altered by the impressions, evil fore-bodings, or even firm convictions of the human mind. God is good and the source of all good, and the real being of each one of us is

What, then, shall we do with our human sense of fear? Ignore it? Carry on our lives as best we can in spite of it? That isn't enough. Christian Science does not deny the necessity of overcoming fear, but it reiterates what is emphasized again and again in the Bible; namely, that nothing can separate

man in his true being from the love of God.

Mary Baker Eddy, the Discoverer and Founder of Christian Science, never ignores the fears we feel, never belittles their hold upon our human sense of things, but throughout her writings she shows that this hold is not real and that it can be faced effectively with an understanding of the true, spiritual nature of our being. She says, "Fear never

John Jan

Two current items in the news need to be read in juxtaposition.

Joseph C. Harsch

One is that the OPEC countries (Organization of Petroleum Exporting Countries) are talking about another round of stiff rises in the

The other is that U.S. Secretary of State Henry Kissinger has just been to Tehran where he signed an agreement with the Shah of Iran for more sales of American weapons to Iran as part of a trade package for a six-year period extending through 1980. In the package Iran will buy \$10 billion worth of U.S. weapons, plus some \$24 billion worth of civilian goods. In return Iran will deliver \$16 billion worth of goods of which \$14 billion would be in oil. The balance of \$18 billion owing to the U.S. would presumably be paid by Iran out of earnings from oil sales to other countries.

Is there anything wrong with this arrangement under which Iran will continue to receive a lot of extremely expensive and highly sophisticated American weapons?

Sen. Hubert Humphrey thinks there is. A staff report has come from his subcommittee on foreign assistance. This is under the Senate's Committee on Foreign Relations. The reIran + oil + guns

port claims that the sale of American arms to Iran beginning in 1972 has gone "out of control." The staff thinks the traffic needs more careful and regular policy review. It contends that the weapons Iran is getting are so sophisticated that anywhere from 50 to 60 thousand Americans will be going to Iran to teach the Iranians in the use of these weapons. It fears that this could involve the United States in an-

other Vietnam type involvement. The State Department denies that the program is "out of control." It contends that the arming of Iran fits properly into existing American foreign policy which relies primarily on Iran and Saudi Arabia for stability in the Persian Gulf area in the wake of Britain's withdrawal. It denies that a weapons delivery program worth about \$2 billion per year is exorbitant or unusual or out of scale.

Recent agreements (still pending clearance by Congress) for arms sales to Saudi Arabia are in the same range. On a per capita basis they would be onormously larger. The delivery program for Saudi Arabia would run a little under the \$2 billion range of the Iranian program. But Saudi Arabia has a population of nine million against 33 million for Iran. And the

OPINION AND...

If Saudi Arabia needs to buy some \$2 billion worth of American weapons a year, a case can certainly be made for Iran needing even more, particularly since Iran does sit on the mountain passes down which the Russians have long wanted to travel - and have sometimes explored, tentatively,

But there is an interesting difference on the record in the behavior of the two countries on oil prices. Saudi Arabia has consistently restrained those OPEC countries who have been loudest for higher prices. Thanks to Saudi Arabia, Americans (and West Europeans and Japanese) have been paying less for their oil and gasoline than would otherwise be the case. Iran has usually been loud in its demands for the higher prices.

It would seem to me that it is in accord with American interests in the Middle East to have Iran be strong enough to defend itself and to contribute to stability in the Persian Gulf. And Iran is going to get arms from someplace. If the Shah doesn't get arms from the U.S. he will get them from Western Europe, or as a

I don't see that anything would be gained! withholding permission for Iran to buy Ame ican arms with its oil money. True, there is: question whether Iranians really need as may and as sophisticated weapons as they was Perhaps some of the money could be used better advantage in the industrial and soci development of the country. But the policy of encouraging Iran to become a modern, and tary power is part of the general body of ent ing American foreign policy which is not bety seriously challenged.

What does emerge is a question whether Washington has had as good a deal as it show be getting out of its trade with Iran. Showing Iranians be pushing for higher oil may loudly as they have been when they was much from Washington?

If Dr. Kissinger had been the master by gainer he is supposed to be, one would exper the Iranians to join the Saudis in arguing it restraint on oil prices.

Surely it is reasonable to hope builthy are to get all the superweapons the have in order they will from now on be a lace working toward oil price restraint.

# The itch to go nuclear

It is obvious that more will have to be done bottle had beneficent uses as well, and partly are not only the United States but France and down. All would be difficult if nuclear proliferation is to stop. Since 1945, to prepare for the day, though it then seemed the human race has become so accustomed to remote, when the world would run out of oil. living with nuclear weapons that it rarely recalls Hiroshima, or is conscious of the pres- were twofold First, by creating a vast nuclear ence today of thousands of such weapons tar- energy industry and strong national vested ingeted on its greatest cities, or stops to think of terest, it ensured that the preferred alternathe chain reaction which would ensue if even tive to oil as an energy source would be the one were exploded in anger.

It may be the recognition by governments of this awesome capability, or it may perhaps be simply a fortunate conjunction of economic and political circumstances which has over the years limited the nuclear club to five full members and two aspirants, India and Israel.

This situation seems almost certain to change soon. Experts believe that within 10 years at least 20 nations, probably more, will have what is called a "muclear option," that is, the means to put together nuclear weapons as readily as Israel and India can today. Why this explosion of nuclear weapons capability?

Twenty years ago the United States launched its "Atoms for Peace" program to assist other nations to develop nuclear energy for peaceful purposes. The motivation was partly to salve the United States' conscience cessing and enrichment facilities.

## The state of the pet-rocky economy

Americans still have enough extra money to buy per rocks and cans of Vermont air that are, in fact, manufactured in Massachusetts, Price: \$2, Instructions: "Tilt can toward nose and inhale deeply. To simulate mountain air on a winter day, place in freezer for one hour prior to inhalation."

But don't let that gulping and general all-around conspicuous consumption fool you. Americans, it seems, are no longer the Richest People in the World.

The Organization for Economic Cooperation and Devolopment - a sort of exclusive club of the 24 richest nations in the West - has made its members empty their pockets and declare their assets, so to speak. And it turns out that, in terms of per capita income, the United States (at \$6,600) ranks behind both Switzerland (\$6,970) and Sweden (\$6,880).

Well, you say, Americans are still the last of the big spenders - the moneybags whose largess keeps the rest of the world going around. Wrong again. In proportion to its wealth the United States ranks 11th among the Western nations allotting funds to "developing countries" and "International organizations," like the United Nations.

The notion will also have to be revised that the American tourist abroad is balancing the exchequers of photogenic countries on his credit card. In the exchange game of my patriotic souvenirs (made in Hong Kong) vs. yours, we're getting more than we're giving. Of the 24 OECD countries, the United States attracts the most

## Melvin Maddocks

tourists, who leave behind about \$6 billion a year before they make it back to Customs.

All right, you say. Still, nobody - but nobody - can beat an American at good old-fashloned waste. True. The United States is first in per-capita television sets and telephones and the consumption of meat. But - can it be? - the Canadian now uses more energy than the American.

We're just going to have to face it. After 200 years in the business of getting and sponding, we're no longer No. 1. And if projections continue, the OECD-watchers say, the U.S. may soon fall to fifth place in per-capita income, behind Canada and Ireland.

The scene is a hobo jungle, somewhere in the United States, in 1980. Two dignified, unshaven gentlemen in third-hand gray suits and old tennis shoes are preparing breakfast. They are known only as the other John Paul and Howard H. John Paul glances at an old newspaper he is using to start a fire under an ancient pot of Mulligan stew.

John Paul: What's this? Good news! It says here the United States now ranks 18th in per-capita income, right behind Yugoslavia.

Howard: Oh, what a break, John Paul! Remember what it was like when we were No. 1, and there was no place to go but down?

John Paul: Nobody loved us in those bad old days. Everybody's so nice to us now.

Howard (reading from another part of the paper) Look what's heading the best-seller list. A novel called "The Beautiful American." And it's by an Englishman I can't believe it! John Paul (now on the financial page): It says here that the small cars from Detroit, imported by the Japanese, are really cutting into their

Howard: I guess with our cheap American labor we can keep prices down and clobber those big gas-guzzling Toyotas and Datsuns. And I notice a story on the enter tainment page, reporting that more and more Spanish producers are coming to California to make low-budget

Howard: Well, I don't wish anybody grief, but it's somebody else's turn to be rich and unhappy. I'm already beginning to resent the Yugoslavians. Why don't they tip our belihops better, when you consider they're practically all millionaires?

John Paul: "Think ahead" is the motto of the hobo as well as the millionaire. Let's prepare now.

He lifts his soup ladic like a baton, and on the morning air the joyful chant rises in unison from the two men: "We're number 20! We're number 20!"

## America's 'born again' presidential candidates

United States presidency, the major candidates are men who declare explicit commitment to evangelical Christianity. More attention has focused on the Democratic nomince, Jimmy Car- fied so openly with evangelical piety and voter, but President Gerald Ford and his Republican challenger Ronald Reagan are affect with the same evangelical wing of Protestant-

This would have astonished Thomas Jefferson, whose religious outlook was shaped by the Enlightenment and who expected the whole nation to move swiftly away from orthodox Go., community as a deacon of the church Christianity. It also seems paradoxical in the there, and of going to the Northeast on evangeface of many trends marking the present as a listic missions for the Southern Baptist Consecular age.

But in the nation's bicentennial year, the leading candidates for national leadership all ther do I hesitate to say publicly that the most stand closer to the evangelical faith of Jona- important thing in my life is Jesus Christ." ## Richard L. Strout

Put simply, the earth is a small planet riculture Earl Buiz can never stop recalling it.

reaching a balance between its human paper. He notes with price that the huge public storlation and its food shows with price that the huge public storgrain-to-meat process is less efficient in the comment. It would be counted from the rement of the story of t balance either by expanding the food supply or by slowing the rate of human reproduction.

Thinking of the earth as a small planet seemed daring a few years ago but the concept is easier with the Viking on Mars, and with the human landing on the moon. Everything is relative; the earth was big when the population was a billion or so; population now is four billion and may double in a couple of generations.

The immediate global outlook for food is good. If favorable weather continues this year, Canada and the United States, who are the combined broadbasket of the world, may set an all-time record for corn, and next to the taries amounts to more than India uses for its

ment hald farmers not to produce. It seems in credible. There was a huge government con-trolled reservo of food. What to do with the ex-
